ARBORICULTURAL REPORT

Following my recent site visit I have much pleasure in sending you a copy of my recommendations for Arboricultural Work.

Report Limitations

This report consists of my observations as I walked around the grounds with Health & Safety as the criteria. The tree was visually inspected from ground level and of a preliminary nature.

Report

T1 Alder (*Alnusglutinosa*), This tree is infected with Ganoderma in all of the tree main stems at the main junction. The tree is lacking vigour in the upper crown indicating reduction in nutrients to the upper regions of the tree. The mid-crown has several woodpecker hole indicating decay in this area of the tree, The smaller stem is virtually moribund.

Recommendations

Due to the decay at height and close proximity to the house I feel that reduction would still leave a hazard potential, along with the decay to the base I recommend the tree is felled to the main junction approximately 1.2m above ground level leaving the young vigorous growth and re-coppiced and at regular intervals.

If I can be of further assistance please don't hesitate to contact me.

Yours sincerely

M. Cross
