

Schwegler 1WQ Winter Bat Roost
Code: 002114D

A sophisticated bat box designed for the safe hibernation of bats in winter as well as for roosting, forming colonies and raising their young during summer. The 1WQ has an attractive design and is easy and convenient to install on the wall of a building.

The integrated insulation in combination with the well known advantages of Schwegler WoodcretePLUS are ideal for the year-round needs of bat species which inhabit buildings. The 1WQ Winter Bat Box uses the same patented Schwegler "double wall system" as the 1FW Hibernation Box, which has been tested and proven for decades and used in many professional and scientific projects in forests all over Europe.

The overall design and combination of several well-insulating materials in a layer structure ensures outstanding insulation properties but still guaranties sufficient air-convection and permeability. The extremely durable material will last for many decades providing shelter for the bats.

The insulation not only protects the bats in winter but also prevents overheating during summer.

This box is self-cleaning and thus completely maintenance-free
