Scrape Creation

Refer to wetland bird mitigation Habitat Management and Monitoring Plan (Ref 2376-1D) By EPR

Scrapes will be created in the suitable locations within the fields with the following specification:

- 20m by 20m or larger;
- Scalloped edge, to increase the length of wet muddy areas;
- Gentle slopes with an uneven finish, to allow gradual exposure of feeding surfaces;
- Water depth in early spring should be:
 - Up to 25cm over half of the area;
 - 25-50cm over the rest;
- Create between July and November; and
- Spoil can be spread across the remaining field
