The application is for 8 laterals to be removed entire, 2 in the SE sector and 6 in the E sector, these laterals have been pinpointed exactly by the use of annotated images 3 and 5 and this work has been termed removal as opposed to reduction.

Then there is reduction in height of a primary stem in the NE sector from 14m to 10m by removal of 4m;

and reduction in height of a primary stem in the E sector from 15m to 10m by removal of 5m.

Again this height reduction is illustrated exactly using annotated images 4 and 5
