Dear Ms L Wells

Planning consultation: Erection of 3 two-bed dwellings on the land adjacent to the public house.

Location: The Swan, Jessie Road, Havant, PO9 3TH

Thank you for your consultation on the above dated 26 October 2023 which was received by Natural England on 26 December 2023.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

SUMMARY OF NATURAL ENGLAND'S ADVICE

NO OBJECTION - SUBJECT TO APPROPRIATE MITIGATION BEING SECURED

We consider that without appropriate mitigation this application could have a significant impact on:

- *Solent Maritime Special Area of Conservation (SAC)*
- *Solent and Southampton Waters Special Protection Area (SPA) and Ramsar*
- *Portsmouth Harbour SPA and Ramsar*
- *Chichester and Langstone Harbour SPA and Ramsar*
- *Solent and Isle of Wight Lagoons SAC*

In order to mitigate these adverse effects and make the development acceptable, the following mitigation measures are required / or the following mitigation options should be secured:

- Mitigation measures need to be secured as set out in the AA.

We advise that an appropriate planning condition or obligation is attached to any planning permission to secure these measures.

Natural England's further advice on designated sites/landscapes and advice on other natural environment issues is set out below.

Habitat Regulations Assessment (HRA)

Natural England notes that your authority, as competent authority, has undertaken an appropriate assessment of the proposal in accordance with regulation 63 of the Conservation of Species and Habitats Regulations 2017 (as amended). Natural England is a statutory consultee on the appropriate assessment stage of the Habitats Regulations Assessment process, and a competent authority should have regard to Natural England's advice.

Your appropriate assessment dated 24 October 2023 concludes that your authority is able to ascertain that the proposal will not result in adverse effects on the integrity of any of the sites in question. Having considered the assessment, and the measures proposed to mitigate for any adverse effects, it is the advice of Natural England that it is not possible at this time based on the available information to ascertain that the proposal will not result in adverse effects on the integrity of the sites in question.

Further assessment and consideration of mitigation options is required, and Natural England provides the following advice on the additional assessment work required:

Deterioration of the Water Environment

The proposals considered consist of the development of three two-bed dwellings on the land adjacent to a public house, utilising new vehicular access, with associated parking and landscaping, including the reconfiguration of the beer garden and car park of the public house.

Nutrient Budget

The planning application is supported by an accompanying copy of the Solent Nutrient Budget calculator. The development will be served by Budds Farm WwTW, which has a current permit limit of 7.7 mgTN/l assuming that deductible acceptable loading is included. Overall the calculated total annual nitrogen budget to mitigate is 2.74 kgTN/year.

- Budds Farm WwTW

Please note the calculation is based on all wastewater from the development being treated at Budds Farm WwTWs. If this situation changes, a reassessment of the nutrient calculation will be required and a revised Habitats Regulations Assessment will be necessary. Deductible acceptable loading has been included, which is correct for this borough.

- Bespoke Occupancy Rates

The Applicant has used an occupancy rate of two persons per dwelling based on the Havant Council occupancy calculator. It is Natural England's view that competent authorities may choose to adopt bespoke calculations for detailed planning applications, if sound evidence is available. However, please note that unless there is a clear justification for them to differ, such rates would need to be applied consistently in line with other policy requirements/approaches used in relation to the scheme (e.g. for calculating open space requirements). These are matters for each competent authority. Natural England's advice is to take a precautionary approach that recognises the uncertainty.

- Land Use

It is noted that the existing land use of the site has been considered as 0.25 ha of commercial/industrial urban land, and the future land use is considered to be 0.075 ha of residential urban and 0.175 ha of commercial/industrial urban land. Natural England suggest that gardens and associated infrastructure for residential dwellings would also be considered residential urban land. It is unclear whether the car park and beer garden which will be redeveloped as gardens and residential parking respectively, have also been recategorized as residential urban land. It is recommended that a land use plan is provided to show which parts of the site have been assigned each land use. This is to provide certainty in the classifications and to ensure that they are sufficiently precautionary. Provided the LPA are satisfied that the land use figures are correct and precautionary, Natural England raises no further comments.

Nutrient Mitigation

In order to offset the positive nutrient load arising from the proposed development, your Appropriate Assessment states the Applicant has indicated that credits will be purchased from Warblington Farm Mitigation Option. As you are aware, appropriate assessments cannot have lacunae and must contain complete, precise, and definitive findings and conclusions capable of removing all reasonable scientific doubt as to the effects of the works proposed on the protected site concerned. Complete information is required to ensure that the proposal will not affect the integrity of the international sites.

Recreational Disturbance – Solent Special Protection Areas (SPAs)

This application is within 5.6 km of the Solent and Southampton Water (SPA) and may lead to a net increase in residential accommodation. Natural England is aware that Havant Borough Council have adopted planning policy to mitigate against adverse effects from recreational disturbance on the Solent SPA sites, as agreed by the Solent Recreation Mitigation Partnership (SRMP), also known as Bird Aware Solent.

Provided that the applicant is complying with the policy and the Bird Aware Definitive Strategy, Natural England are satisfied that the applicant has mitigated against the potential adverse effects of the development on the integrity of the European sites and has no objection to this aspect of the application.

Please note, your authority's appropriate assessment should reflect the current developer contribution rates, which are updated every April in line with the Retail Price Index.

Site of Special Scientific Interest

The above impacts on Habitats sites (SAC/SPA) may also impact SSSIs. Please note that if your authority is minded to grant planning permission contrary to the advice in this letter, you are required under Section 28I (6) of the Wildlife and Countryside Act 1981 (as amended) to notify Natural England of the permission, the terms on which it is proposed to grant it and how, if at all, your authority has taken account of Natural England's advice. You must also allow a further period of 21 days before the operation can commence.

Further general advice on the protected species and other natural environment issues is provided at Annex A.

If you have any queries relating to the advice in this letter please contact consultations@naturalengland.org.uk.

Should the applicant wish to discuss the further information required and scope for mitigation with Natural England, we would be happy to provide advice through our [Discretionary Advice Service](#).

Please consult us again once the information requested above, has been provided.

Yours sincerely

Georgie Findlay
Thames Solent Area Team
Natural England

Annex A – Additional advice

Natural England offers the following additional advice:

Landscape

Paragraph 174 of the [National Planning Policy Framework](#) (NPPF) highlights the need to protect and enhance valued landscapes through the planning system. This application may present opportunities to protect and enhance locally valued landscapes, including any local landscape designations. You may want to consider whether any local landscape features or characteristics (such as ponds, woodland, or dry-stone walls) could be incorporated into the development to respond to and enhance local landscape character and distinctiveness, in line with any local landscape character assessments. Where the impacts of development are likely to be significant, a Landscape & Visual Impact Assessment should be provided with the proposal to inform decision making. We refer you to the [Landscape Institute](#) Guidelines for Landscape and Visual Impact Assessment for further guidance.

Best and most versatile agricultural land and soils

Local planning authorities are responsible for ensuring that they have sufficient detailed agricultural land classification (ALC) information to apply NPPF policies (Paragraphs 174 and 175). This is the case regardless of whether the proposed development is sufficiently large to consult Natural England. Further information is contained in [GOV.UK guidance](#) Agricultural Land Classification information is available on the [Magic](#) website on the [Data.Gov.uk](#) website. If you consider the proposal has significant implications for further loss of 'best and most versatile' agricultural land, we would be pleased to discuss the matter further.

Guidance on soil protection is available in the Defra [Construction Code of Practice for the Sustainable Use of Soils on Construction Sites](#), and we recommend its use in the design and construction of development, including any planning conditions. For mineral working and landfilling separate guidance on soil protection for site restoration and aftercare is available on [Gov.uk](#) website. Detailed guidance on soil handling for mineral sites is contained in the Institute of Quarrying [Good Practice Guide for Handling Soils in Mineral Workings](#).

Should the development proceed, we advise that the developer uses an appropriately experienced soil specialist to advise on, and supervise soil handling, including identifying when soils are dry enough to be handled and how to make the best use of soils on site.

Protected Species

Natural England has produced [standing advice](#)¹ to help planning authorities understand the impact of particular developments on protected species. We advise you to refer to this advice. Natural England will only provide bespoke advice on protected species where they form part of a Site of Special Scientific Interest or in exceptional circumstances.

Local sites and priority habitats and species

You should consider the impacts of the proposed development on any local wildlife or geodiversity sites, in line with paragraphs 175 and 179 of the NPPF and any relevant development plan policy. There may also be opportunities to enhance local sites and improve their connectivity. Natural England does not hold locally specific information on local sites and recommends further information is obtained from appropriate bodies such as the local records centre, wildlife trust, geoconservation groups or recording societies.

Priority habitats and Species are of particular importance for nature conservation and are included in the England Biodiversity List published under section 41 of the Natural Environment and Rural Communities Act 2006. Most priority habitats will be mapped either as Sites of Special Scientific Interest, on the Magic website or as Local Wildlife Sites. List of priority habitats and species can be found on [Gov.uk](#).

Natural England does not routinely hold species data, such data should be collected when impacts on priority habitats or species are considered likely. Consideration should also be given to the

¹ <https://www.gov.uk/protected-species-and-sites-how-to-review-planning-proposals>

potential environmental value of brownfield sites, often found in urban areas and former industrial land, further information including links to the open mosaic habitats inventory can be found [here](#).

Ancient woodland, ancient and veteran trees

You should consider any impacts on ancient woodland and ancient and veteran trees in line with paragraph 180 of the NPPF. Natural England maintains the Ancient Woodland [Inventory](#) which can help identify ancient woodland. Natural England and the Forestry Commission have produced [standing advice](#) for planning authorities in relation to ancient woodland and ancient and veteran trees. It should be taken into account by planning authorities when determining relevant planning applications. Natural England will only provide bespoke advice on ancient woodland, ancient and veteran trees where they form part of a Site of Special Scientific Interest or in exceptional circumstances.

Environmental gains

Development should provide net gains for biodiversity in line with the NPPF paragraphs 174(d), 179 and 180. Development also provides opportunities to secure wider environmental gains, as outlined in the NPPF (paragraphs 8, 73, 104, 120, 174, 175 and 180). We advise you to follow the mitigation hierarchy as set out in paragraph 180 of the NPPF and firstly consider what existing environmental features on and around the site can be retained or enhanced or what new features could be incorporated into the development proposal. Where onsite measures are not possible, you should consider off site measures. Opportunities for enhancement might include:

- Restoring a neglected hedgerow.
- Creating a new pond as an attractive feature on the site.
- Planting trees characteristic to the local area to make a positive contribution to the local landscape.
- Using native plants in landscaping schemes for better nectar and seed sources for bees and birds.
- Incorporating swift boxes or bat boxes into the design of new buildings.
- Designing lighting to encourage wildlife.
- Adding a green roof to new buildings.

Natural England's [Biodiversity Metric 4.0](#) may be used to calculate biodiversity losses and gains for terrestrial and intertidal habitats and can be used to inform any development project. For small development sites the [Small Sites Metric](#) may be used. This is a simplified version of [Biodiversity Metric 4.0](#) and is designed for use where certain criteria are met.

Natural England's [Environmental Benefits from Nature tool](#) may be used to identify opportunities to enhance wider benefits from nature and to avoid and minimise any negative impacts. It is designed to work alongside [Biodiversity Metric 4.0](#) and is available as a beta test version.

Green Infrastructure

Natural England's [Green Infrastructure Framework](#) provides evidence-based advice and tools on how to design, deliver and manage green infrastructure (GI). GI should create and maintain green liveable places that enable people to experience and connect with nature, and that offer everyone, wherever they live, access to good quality parks, greenspaces, recreational, walking and cycling routes that are inclusive, safe, welcoming, well-managed and accessible for all. GI provision should enhance ecological networks, support ecosystems services and connect as a living network at local, regional and national scales.

Development should be designed to meet the [15 Green Infrastructure Principles](#). The Green Infrastructure Standards can be used to inform the quality, quantity and type of green infrastructure to be provided. Major development should have a GI plan including a long-term delivery and management plan. Relevant aspects of local authority green infrastructure strategies should be delivered where appropriate.

GI mapping resources are available [here](#) and [here](#). These can be used to help assess deficiencies in greenspace provision and identify priority locations for new GI provision.

Access and Recreation

Natural England encourages any proposal to incorporate measures to help improve people's access to the natural environment. Measures such as reinstating existing footpaths together with the creation of new footpaths and bridleways should be considered. Links to urban fringe areas should also be explored to strengthen access networks, reduce fragmentation, and promote wider green infrastructure.

Rights of Way, Access land, Coastal access and National Trails

Paragraphs 100 and 174 of the NPPF highlight the importance of public rights of way and access. Development should consider potential impacts on access land, common land, rights of way and coastal access routes in the vicinity of the development. Consideration should also be given to the potential impacts on any nearby National Trails. The National Trails website www.nationaltrail.co.uk provides information including contact details for the National Trail Officer. Appropriate mitigation measures should be incorporated for any adverse impacts.

Biodiversity duty

Your authority has a [duty](#) to have regard to conserving biodiversity as part of your decision making. Conserving biodiversity can also include restoration or enhancement to a population or habitat. Further information is available [here](#).
