Dear Arleta

Planning consultation: application of development of site pursuant to Planning Permission ref. APP/17/00863 demolition of 1983 office building and associated brick and glass corridor up to 70 residential units, landscaping, parking and infrastructure Discharge Condition 17 of Planning Permission APP/17/00863 amended by APP/21/01292 and Condition 26 of Permission APP/17/00863 (B) (viability assessment)

Location: Southleigh Park House, Eastleigh Road, Havant, PO9 2PE

Thank you for your consultation on the above dated 17 October 2023 which was received by Natural England on the same day.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

SUMMARY OF NATURAL ENGLAND'S ADVICE

FURTHER INFORMATION REQUIRED TO DETERMINE IMPACTS ON DESIGNATED SITES

As submitted, the application could have a likely significant effect on designated sites in the Solent, including:

- Solent and Dorset Coast SPA
- Portsmouth Harbour SPA and Ramsar Site
- Chichester and Langstone Harbours SPA
- Solent Maritime SAC
- Solent and Southampton Water SPA

Your Authority will need to undertake a Habitats Regulations Assessment (HRA) to determine whether the proposal is likely to have a significant effect on the sites named above, proceeding to

the appropriate assessment stage where significant effects cannot be ruled out. The following information is required to inform a HRA:

- Consideration of this project's effects on total nitrogen and/or total phosphorus nutrient loading within the Solent catchment, including a nutrient budget calculation.
- Details of proposed mitigation measures to address any nutrient impacts, including appropriately funded management and monitoring, and details of how the measures will be secured for the lifetime of the development.
- Any other likely significant effects that could arise from the development should also be assessed.

Once the above information is obtained, please consult Natural England on any appropriate assessment your authority may decide to make.

Waste Water and Nutrients

Although we recognise this consultation is for detailed matters relating to conditions as part of APP/17/00863, proposals that comprise new development with overnight accommodation will have waste water implications. It is Natural England's view that these implications, and all other matters capable of having a significant effect on designated sites in the Solent, must be addressed in the ways required by Regulation 63 of the Conservation of Habitats and Species Regulations 2017.

This only applies to developments where the treated effluent discharges into any Solent European site (Solent Maritime SAC, Solent and Southampton Water SPA and Ramsar site, Portsmouth Harbour SPA and Ramsar site, Chichester and Langstone Harbours SPA and Ramsar site, Solent and Dorset Coast SPA or Solent and Isle of Wight Lagoon SAC), or any water body that subsequently discharges into such a site. It is for your authority to determine if this development meets these criteria.

Recreational Disturbance

Since this application will result in a net increase in residential accommodation, impacts to the coastal Special Protection Area(s) and Ramsar Site(s) may result from increased recreational disturbance.

Your authority has measures in place to manage these potential impacts through the agreed strategic solution which we consider to be ecologically sound. Subject to the appropriate financial contribution being secured, Natural England is satisfied that the proposal will mitigate against the potential recreational impacts of the development on the site(s).

Notwithstanding this, Natural England's advice is that this proposed development, and the application of these measures to avoid or reduce the likely harmful effects from it, may need to be formally checked and confirmed by your Authority, as the competent authority, via an appropriate assessment in view of the European Site's conservation objectives and in accordance with the Conservation of Habitats & Species Regulations 2017 (as amended).

This is because Natural England notes that the recent People Over Wind Ruling by the Court of Justice of the European Union concluded that, when interpreting article 6(3) of the Habitats Directive, it is not appropriate when determining whether or not a plan or project is likely to have a significant effect on a site and requires an appropriate assessment, to take account of measures intended to avoid or reduce the harmful effects of the plan or project on that site. The ruling also concluded that such measures can, however, be considered during an appropriate assessment to determine whether a plan or project will have an adverse effect on the integrity of the European site. Your Authority should have regard to this and may wish to seek its own legal advice to fully understand the implications of this ruling in this context.

Please note, your authority's appropriate assessment should reflect the current developer contribution rates, which are updated every April in line with the Retail Price Index.

Elvin and Machin legal opinions

The consultation documents provided by your authority do not include information to demonstrate that the requirements of Regulations 63 and 64 of the Habitats Regulations have been considered by your authority, i.e. the consultation does not include a Habitats Regulations Assessment (HRA). In considering the need for a HRA for the current application your authority should note the following:

In line with Elvin and Machin legal opinions (15th March 2006 and 14th April 2007 respectively), the Conservation of Habitats and Species Regulations 2017 ('the Habitats Regulations') should be applied to subsidiary stages of the planning consent process. Natural England therefore recommends that a Habitats Regulation Assessment is completed by your authority prior to any decision being made on this discharge of condition/clause.

Additional advice

Bechstein's Bats

Natural England would like to draw your attention to the proximity of the site to Southleigh Forest and the ancient Forest of Bere landscape where the Bechstein's bat species is found in internationally important numbers. The species is listed as a Priority Species under the UK Biodiversity Action Plan (BAP).

Natural England recommends that the application is supported by a Biodiversity Mitigation and Enhancement Plan (BMEP) that has been agreed by a Hampshire County Council (HCC) Ecologist. This will ensure the proposal meets the requirements of the standing advice and the additional requirements for biodiversity enhancement as set out in National Planning Policy Framework.

In line with the 'avoid, mitigate, compensate' hierarchy, Natural England recommends that potential impacts are avoided in the first instance, for example through the design of the scheme, such as location of built development, access restrictions, sensitive lighting strategy. Where avoidance is not possible, the BMEP should include measures for mitigating impacts on protected species and habitats and include biodiversity compensation measures for any residual biodiversity losses that cannot be fully mitigated on site.

Further advice best practice measures for Bechstein's bats can be found in the [Trowbridge Bat Mitigation Strategy](#)

Further general advice on the protected species and other natural environment issues is provided at Annex A.

Please note that if your Authority is minded to grant planning permission contrary to the advice in this letter and aforementioned letter sent to your Head of Planning, you are required under Section 28I (6) of the Wildlife and Countryside Act 1981 (as amended) to notify Natural England of the permission, the terms on which it is proposed to grant it and how, if at all, your Authority has taken account of Natural England's advice. You must also allow a further period of 21 days before the operation can commence.

Yours sincerely,

Rachael Clemson
Sustainable Development Lead Adviser
Thames Solent Area Team

Annex A – Additional advice

Natural England offers the following additional advice:

Landscape

Paragraph 174 of the [National Planning Policy Framework](#) (NPPF) highlights the need to protect and enhance valued landscapes through the planning system. This application may present opportunities to protect and enhance locally valued landscapes, including any local landscape designations. You may want to consider whether any local landscape features or characteristics (such as ponds, woodland, or dry-stone walls) could be incorporated into the development to respond to and enhance local landscape character and distinctiveness, in line with any local landscape character assessments. Where the impacts of development are likely to be significant, a Landscape & Visual Impact Assessment should be provided with the proposal to inform decision making. We refer you to the [Landscape Institute](#) Guidelines for Landscape and Visual Impact Assessment for further guidance.

Best and most versatile agricultural land and soils

Local planning authorities are responsible for ensuring that they have sufficient detailed agricultural land classification (ALC) information to apply NPPF policies (Paragraphs 174 and 175). This is the case regardless of whether the proposed development is sufficiently large to consult Natural England. Further information is contained in [GOV.UK guidance](#). Agricultural Land Classification information is available on the [Magic](#) website on the [Data.Gov.uk](#) website. If you consider the proposal has significant implications for further loss of 'best and most versatile' agricultural land, we would be pleased to discuss the matter further.

Guidance on soil protection is available in the Defra [Construction Code of Practice for the Sustainable Use of Soils on Construction Sites](#), and we recommend its use in the design and construction of development, including any planning conditions. For mineral working and landfilling separate guidance on soil protection for site restoration and aftercare is available on [Gov.uk](#) website. Detailed guidance on soil handling for mineral sites is contained in the Institute of Quarrying [Good Practice Guide for Handling Soils in Mineral Workings](#).

Should the development proceed, we advise that the developer uses an appropriately experienced soil specialist to advise on, and supervise soil handling, including identifying when soils are dry enough to be handled and how to make the best use of soils on site.

Protected Species

Natural England has produced [standing advice](#)¹ to help planning authorities understand the impact of particular developments on protected species. We advise you to refer to this advice. Natural England will only provide bespoke advice on protected species where they form part of a Site of Special Scientific Interest or in exceptional circumstances.

Local sites and priority habitats and species

You should consider the impacts of the proposed development on any local wildlife or geodiversity sites, in line with paragraphs 175 and 179 of the NPPF and any relevant development plan policy. There may also be opportunities to enhance local sites and improve their connectivity. Natural England does not hold locally specific information on local sites and recommends further information is obtained from appropriate bodies such as the local records centre, wildlife trust, geoconservation groups or recording societies.

Priority habitats and Species are of particular importance for nature conservation and are included in the England Biodiversity List published under section 41 of the Natural Environment and Rural Communities Act 2006. Most priority habitats will be mapped either as Sites of Special Scientific Interest, on the Magic website or as Local Wildlife Sites. List of priority habitats and species can be found on [Gov.uk](#).

Natural England does not routinely hold species data, such data should be collected when impacts on priority habitats or species are considered likely. Consideration should also be given to the potential

¹ <https://www.gov.uk/protected-species-and-sites-how-to-review-planning-proposals>

environmental value of brownfield sites, often found in urban areas and former industrial land, further information including links to the open mosaic habitats inventory can be found [here](#).

Ancient woodland, ancient and veteran trees

You should consider any impacts on ancient woodland and ancient and veteran trees in line with paragraph 180 of the NPPF. Natural England maintains the Ancient Woodland [Inventory](#) which can help identify ancient woodland. Natural England and the Forestry Commission have produced [standing advice](#) for planning authorities in relation to ancient woodland and ancient and veteran trees. It should be taken into account by planning authorities when determining relevant planning applications. Natural England will only provide bespoke advice on ancient woodland, ancient and veteran trees where they form part of a Site of Special Scientific Interest or in exceptional circumstances.

Biodiversity and wider environmental gains

Development should provide net gains for biodiversity in line with the NPPF paragraphs 174(d), 179 and 180. It is anticipated that major development (defined in the [NPPF glossary](#)) will be required by law to deliver a biodiversity gain of at least 10% from January 2024 and that this requirement will be extended to smaller scale development in April 2024. For nationally significant infrastructure projects (NSIPs) it is anticipated that the requirement for biodiversity net gain will be implemented from 2025.

Further information on the timetable for mandatory biodiversity net gain can be found [here](#). Further general information on biodiversity net gain can be found [here](#).

The Government's [Biodiversity Metric](#) should be used to calculate biodiversity losses and gains for terrestrial and intertidal habitats and can be used to inform any development project. For small development sites the [Small Sites Metric](#) may be used. This is a simplified version of the [Biodiversity Metric](#) and is designed for use where certain criteria are met.

We advise you to follow the mitigation hierarchy as set out in paragraph 180 of the NPPF and firstly consider what existing habitats within the site can be retained or enhanced. Where on-site measures are not possible, provision off-site will need to be considered.

Development also provides opportunities to secure wider biodiversity enhancements and environmental gains, as outlined in the NPPF (paragraphs 8, 73, 104, 120, 174, 175 and 180). Opportunities for enhancement might include Incorporating features to support specific species within the design of new buildings such as swift or bat boxes or designing lighting to encourage wildlife.

Natural England's [Environmental Benefits from Nature tool](#) may be used to identify opportunities to enhance wider benefits from nature and to avoid and minimise any negative impacts. It is designed to work alongside the [Biodiversity Metric](#) and is available as a beta test version.

Further information on biodiversity net gain, the mitigation hierarchy and wider environmental net gain can be found in government [Planning Practice Guidance](#).

Green Infrastructure

Natural England's [Green Infrastructure Framework](#) provides evidence-based advice and tools on how to design, deliver and manage green infrastructure (GI). GI should create and maintain green liveable places that enable people to experience and connect with nature, and that offer everyone, wherever they live, access to good quality parks, greenspaces, recreational, walking and cycling routes that are inclusive, safe, welcoming, well-managed and accessible for all. GI provision should enhance ecological networks, support ecosystems services and connect as a living network at local, regional and national scales.

Development should be designed to meet the [15 Green Infrastructure Principles](#). The Green Infrastructure Standards can be used to inform the quality, quantity and type of green infrastructure to be provided. Major development should have a GI plan including a long-term delivery and management plan. Relevant aspects of local authority green infrastructure strategies should be delivered where appropriate.

GI mapping resources are available [here](#) and [here](#). These can be used to help assess deficiencies in greenspace provision and identify priority locations for new GI provision.

Access and Recreation

Natural England encourages any proposal to incorporate measures to help improve people's access to the natural environment. Measures such as reinstating existing footpaths together with the creation of new footpaths and bridleways should be considered. Links to urban fringe areas should also be explored to strengthen access networks, reduce fragmentation, and promote wider green infrastructure.

Rights of Way, Access land, Coastal access and National Trails

Paragraphs 100 and 174 of the NPPF highlight the importance of public rights of way and access. Development should consider potential impacts on access land, common land, rights of way and coastal access routes in the vicinity of the development. Consideration should also be given to the potential impacts on any nearby National Trails. The National Trails website www.nationaltrail.co.uk provides information including contact details for the National Trail Officer. Appropriate mitigation measures should be incorporated for any adverse impacts.

Biodiversity duty

Your authority has a [duty](#) to have regard to conserving biodiversity as part of your decision making. Conserving biodiversity can also include restoration or enhancement to a population or habitat. Further information is available [here](#).
