

FAO: David Eaves
Havant Planning

Date: 21 September 2023

Response to consultee comments:

Building Control Team

Requested: Further details should be provided for the proposed cladding to be used to ensure it has the correct fire resistance (for unprotected area purposes).

Consultants Response:

Fire resistance table can be found here:

<https://www.trimo-group.com/files/downloads/Trimoterm%20Technical%20Specification.pdf>

Document also attached for information.

Please refer to the second column for the Fire Resistance to thickness info.

FM Certification is also attached for your information.

Policy Team

Requested: A policy objection remains unless the EA is satisfied with the modelling being relied upon, and conclusions of an up-to-date FRA, in particular taking into account the extent of the functional floodplain, which had previously been highlighted as a particular concern.

Consultants Response:

The proposed hydraulic model was previously approved by the Environment Agency; we understand that they have been formally consulted, so they can confirm this.
