

I object to the amended plans . The two windows at the rear of the property will cause a considerable problem with privacy. The height of the loft conversion outlook will evade our home and garden and be overbearing with environmental issues.

The height of the windows will overlook all of our garden. There are already 4 windows on the second floor of the property which overlook our home and view directly into our (Redacted). To add a further two at a greater height will mean we will be totally overlooked and the view will be directly into our (Redacted) and into the back of the (redacted) of our home and look on all of our garden. This will take away our privacy and being able to enjoy our garden and home without fear of being viewed at. We should be able to enjoy our garden and home with a degree of privacy. This will be totally reduced by this development.

The environmental impact will be the added light from artificial light in the evenings and the sound from when windows are opened on the conversion . This is why the development should not go ahead. The house was not designed for this as a semi detached house, backing onto houses with gardens. It would have been originally planned to allow some privacy and lower impact from environmental issues. This development will breach those factors and impact our home and lives in a very detrimental way.
