

Good afternoon David

Further to my email below, we have been sent confirmation from Ardent that the EA had confirmed that the technical modelling was acceptable and approved in relation to flooding. They had one query which Ardent are responding to.

Please can you share this information with your Planning Policy Team as it should answer their comment on flood risk.

We are in discussions with Ardent re the updated drainage calculations and FRA and we will send these on once they are provided.

Many thanks and kind regards

Debra

Subject: Portsmouth Water HQ building - APP/21/00601

Hi David

I hope that you are keeping well.

We have been picking up the consultee responses for the Portsmouth Water HQ building application - APP/21/00601. I thought I would send you a quick update on what has been sent today and what is being prepared.

- We have a request out to the consultants for an update to the drainage information as requested by the LLFA which we will send you once it is received.
- There was a request from your Building Control team for details on the proposed cladding and fire resistance. The information in response to this is attached.
- There was also comments made by the Planning Policy Team relating to the hydraulic modelling and it's acceptance by the EA. Our consultant has confirmed that the proposed

hydraulic model was previously approved by the Environment Agency; we understand that they have been formally consulted, so they should be able to confirm this.

- With regards to the request for further information from Tristan Norton (Principal Ecologist)
 - this has been requested from Ecology Solutions and we will send it on as soon as it is received.

I think that is all for now.

Many thanks and kind regards

Debra
