

Good morning Leanne

Many thanks for consulting the nutrient team.

I am now satisfied that the nutrient budget calculator has been completed correctly which indicates that there is a total annual nitrogen load to mitigate of 25.2kg.

As set out in the nutrient consultation response dated 1 June 2023, this will need to be mitigated through a third party mitigation scheme from one of the schemes published on the Partnership for South Hampshire's website: [Potential Nutrient Mitigation Schemes - Partnership for South Hampshire \(push.gov.uk\)](https://push.gov.uk). In particular, the developer will need to identify a mitigation scheme which is suitable to mitigate development draining to Budds Farm WWtW.

The applicant needs to submit an updated European sites avoidance and mitigation checklist which reflects this, and confirm which mitigation scheme they are using and provide evidence that there is the required capacity to mitigate their development in accordance with paragraph 3.11 of the Council's [Position Statement and Mitigation Plan April 23 FINAL.pdf \(havant.gov.uk\)](https://havant.gov.uk). Where there is not already an established scientific link between the proposed development and the mitigation scheme, the applicant may also be required to provide the necessary information to prove this as set out in paragraph 3.9 of the Position Statement.

Kind regards,
Jade
