

Thank you for inviting us to comment on the proposed Bridleway diversion.

Clearly the diversion would not be necessary if the proposed reservoir, which will be an environmental and ecological disaster, is not approved.

If the reservoir is approved then it will obviously be necessary to divert the existing Bridleway as points A to N will be under water, along with many trees, hedges, meadow and other wildlife habitats.

A number of details are not clear on the plan provided. Why does the bridleway split at L, with one part going to M and N and the other to terminating point O. It is not clear where point O is located. Is it inside the current boundary of Staunton Country Park? Or is it planned that the Bridleway will include the lane, which provides the only vehicular access to our property and therefore terminate at the roundabout on Manor Lodge Rd?

I would be grateful if you could clarify these points by providing a better quality map/drawing. We will then be able to comment in detail on the proposal.

Regards
