Your Ref – APP/20/00376 HRA & Appropriate Assessment - Nine new dwellings on the site surrounding the retained Fowley Cottage, 2 on the Warblington Road frontage and 7 in the rear garden area. Fowley Cottage, 46 Warblington Road, Emsworth PO10 7HH
Our Ref – 348381

Hello Daphney,

Thank you for consulting Natural England on the updated Habitats Regulations Assessment and Appropriate Assessment for the above application.

Natural England notes that your authority, as competent authority, has undertaken an appropriate assessment of the proposal in accordance with regulation 63 of the Conservation of Species and Habitats Regulations 2017 (as amended). Natural England is a statutory consultee on the appropriate assessment stage of the Habitats Regulations Assessment process.

Your appropriate assessment concludes that your authority is able to ascertain that the proposal will not result in adverse effects on the integrity of any of the sites in question. Having considered the assessment, and the measures proposed to mitigate for all identified adverse effects that could potentially occur as a result of the proposal, Natural England advises that we concur with the assessment conclusions, providing that all mitigation measures are appropriately secured in any planning permission given. Please find comments on the mitigation below.

Solent Recreation Mitigation Strategy – No Objection subject to mitigation

Since this application will result in a net increase in residential accommodation, impacts to the coastal Special Protection Area(s) and Ramsar site(s) may result from increased recreational pressure. Havant Borough Council has measures in place to manage these potential impacts through the agreed strategic solution which we consider to be ecologically sound.

Subject to the appropriate financial contribution being secured, Natural England is satisfied that the proposal will mitigate against the potential recreational impacts of the development on the site(s). It is Natural England's view that the Solent Mitigation Recreation Strategy Contribution adequately mitigates the effects of the development on potential recreational impacts on the designated sites.

Deterioration of the water environment – No Objection subject to mitigation

The nutrient budget has been calculated in line with Natural England's Advice on Achieving Nutrient Neutrality in the Solent (version 5 June 2020). Provided the competent authority is assured and satisfied that the site areas used in the calculation are correct and that the existing land uses are appropriately precautionary, then Natural England raises no concerns with regard to the nutrient budget.

Please note the calculation is based on all wastewater from the development being treated at Thornham WwTWs. If this situation changes, a reassessment of the nutrient calculation will be required and a revised Habitats Regulations Assessment will be necessary.

In line with Natural England's advice, it is noted that a planning condition will be imposed on any permission to secure that the dwellings shall not be occupied until the Building Regulations Optional requirement of a maximum water use of 110 litres per person per day has been complied with.

It is noted that the approach to address the positive nitrogen budget for this development is via Havant Borough Council's mitigation scheme. We welcome and support this initiative which has scope for nutrient offsetting and biodiversity gain.

Natural England has reviewed the Position Statement and Mitigation Plan for Nutrient Neutrality Development (August 2020) and Warblington Farm Study Evidence Base (Ricardo, June 2020). Natural England concurs with the conclusion of this work that this scheme will deliver effective mitigation for developments draining to Budd's Farm WwTW and Thornham WwTW.

The nitrogen capacity of the land and proposed management of the offsetting land has been discussed and agreed. It is understood that this has been secured through legal agreements to ensure that effective mitigation is delivered for the lifetime of the development. It is also understood that a system has been set up to monitor the developments using the mitigation scheme to ensure there is capacity available for each scheme. Provided this is the case and the long term management of the mitigation scheme is monitored by the local planning authority, as competent authority, to ensure effective mitigation for the lifetime of the development, Natural England raises no further concerns.

It is for the competent authority to determine the importance of timing issues for each development, depending on location and form of mitigation applied. Given the close proximity of the mitigation land to designated sites, Natural England is not expecting any significant timing issues in this case, provided the land is brought into appropriate management at the earliest opportunity. In considering the significance of timing issues within an appropriate assessment competent authorities should take account of the average time taken from the removal of agricultural activities to first occupation and rate of completions for each development. Provided the local planning authority is satisfied that timely mitigation can be delivered in this case, Natural England raises no further comments for consideration.

Construction Environmental Management Plan

It is noted that a CEMP will be secured with any planning permission, with some mitigation measures included in the Appropriate Assessment. Provided the CEMP includes best practice measures for dust control, pollution and surface water drainage measures during construction and measures to prevent noise, lighting and visual disturbance on the designated sites, Natural England raises no further comments. It is also recommended that the following condition is attached to any planning permission:

Wherever possible, percussive piling or works with heavy machinery (i.e. plant resulting in a noise level in excess of 69dbAmax – measured at the sensitive receptor) should be avoided during the bird overwintering period (i.e. October to March inclusive). If such a condition is problematic to the applicant than Natural England will consider any implications of the proposals on the SPA bird interests on a case by case basis through our Discretionary Advice Service. Note: The sensitive receptor is the nearest point of the SPA or any SPA supporting habitat (e.g. high tide roosting site).

We advise that you may want to seek your own legal advice on the implications of the Sweetman II ruling and the level of detail that should be included within an Appropriate Assessment.

Surface water drainage

Due to the close proximity of the designated sites, we advise that any SuDS should be designed and installed in accordance with the requirements in the CIRIA SuDS Manual (C753).

The pollution hazard indices in the CIRIA SuDS Manual (C753) relate to 'protected waters' with regards to drinking water supply. Step 3 under Section 26.7.1 of the SuDS manual outlines that the requirement for extra treatment should be considered in relation to discharge to environmentally protected sites. It states that 'an additional treatment component (i.e. over and above that required for standard discharges), or other equivalent protection, is required that provides environmental protection in the event of an unexpected pollution event or poor system performance'.

Provided this is secured with any planning permission, Natural England raise no further comments.

If you have any queries, please contact me.

Regards,

Joseph Forster
