

TPO 0928 Your ref: APP/22/00273

Description of Works:

In 2017 I was granted permission to crown raise and crown reduce the Monterey Cypress tree in back garden – 14A Kings Way Hayling Island (Ref 3)

This very large, well in excess of 17m dominates the rear of my house and garden and 3 neighbouring properties to a considerable level.

Following the recent storms and high winds, which resulted in a very large branch in excess of 8 feet falling into my garden (Ref 4) I have consulted a competent and registered tree surgeon who recommends the following work is should be carried out:-

Reduce South side of tree by 5 m

Reduce North, West and East sides of tree by 4m

Reduce top of tree by 5m taking it back to its original cut

In addition he also recommends thinning out of tree and removing any dead wood which could possibly damage fences, properties and persons. He feels that if this work is carried out it will help preserve and promote the health of the tree

Following your letter dated 20 April2002 informing us that you cannot accept dual work application for crown reduction and crown thinning I have completed another application form omitting request for thinning

I am now applying for consent to carry out the following works:

Crown reduction of 5m from 20m leaving height of 15m

Crown lateral spread reduction of 8m at widest point from 16m leaving spread of 8m

Crown Lift was not suggested by tree surgeon

Please note all measurements are approximate
