

Are we able to have a catch up on the above and remaining conditions?

Now pilling is agreed by Portsmouth Water this should make it easier.

You had a question for them regarding the remediation strategy (condition 11). We have now agreed to barrier pipes across the site too to protect drinking water.

There are no further site investigations planned and the verification report of the earthworks phase will be ready in due course. The EHO has accepted the details provided.

Are drainage related conditions also now ready for discharge?

Just so you are aware, a duplicate application has been submitted under the S73 planning reference and includes a few more not previously considered. It is in the process of being validated.

I look forward to hearing from you.

Kind regards, Natalie.
