

Front of property 64B Stakes Road.

-Tree T1 is constantly dropping branches into our front garden and onto the public footpath at the front of our property which is a main road and a walking route for school children. We feel there is a high risk that one of these branches could fall and strike a member of my family any visitors to our home when entering or leaving or even a member of public walking along the public footpath. (Photos attached)

- T1 Looks to be causing damage to our driveway as per the report we believe this to be due to the roots extending towards the property. The driveway is breaking up and is very uneven which is a tripping hazard and we believe it will only get worse.

- T1 extends over our front garden and the public highway, it is a very large tree and it stops any natural light from entering the front of our property. (Pictures attached)

-T1 We have now also received a complaint/Concerned letter from our neighbor at 64A Stakes road expressing their concerns/fears regarding our trees.

Our request is to have T1 removed completely to mitigate against all the issues stated above however we understand how important trees are to our environment and the surrounding are so we would look to plant a smaller more manageable native tree in location B.
