

Further to your email 20.11.20 please find enclosed layout drawing showing the dimensions of the fence at the above. The Position of the gate is the same as the original single 5 bar gate which was In Iroko hardwood and this has now been replaced by a pair of untreated Oak gates. A picture of the original gate is enclosed together with a personnel gate which are still in our yard. The personnel gate was fairly close to the boundary with no. 8. All gates are the same standard height.

The photographs you already have show the fence from Western Parade. It is virtually not visible now because of the planting carried out by Ms K. Prentise.

Photographs are enclosed showing the fence with the shrub pulled apart, the new gates and the boundary wall to No. 8.

We do not have any photographs of the original boundary but it was a 225mm thick fletton brick wall approx 1.2 high with extended piers to the main and personnel gate.
