

Hello there,

I would like to take this opportunity to introduce myself [REDACTED] and I am writing to you about a concern of mine and many locals in my area.

It has come to my attention that in the area of Waterloooville down college road, there are a few fields. Situated next to these fields are some woods, the fields are the only natural land we have in this area. I go dog walk here with my family most days and we meet many other dog walkers, we spot many different animals, including deers, grasshoppers, hedgehogs and even some birds of prey like kestrels, which we like to watch catching its prey.

It came to our attention that there has been a poster for a few months displaying to build houses on these fields. Every time I now walk on these fields, I feel downhearted, knowing that the trees, the animals, another part of our natural earth is going. Me and my fellow dog walkers will now have nowhere to walk and let our dogs off the lead, I can no longer go there and run freely and have fun just because a few houses are going to be built there.

If you didn't know already, the natural world is in huge decline because of people like you. People like you who don't actually think about the huge effects this would have on the wildlife, the community, the planet. Our home, our earth is dying and people like you, the local council have a say in this but instead you will just build on it and make it even worse. Instead, you and the council can actually think logically and build trees on this, do something good for our planet, not making it even worse.

Hedgehogs are in huge decline and why? Because houses are being built everywhere you look, these hedgehogs have nowhere at all to live because you build houses on their homes! How would you like it if something smashed down your home and built their own home on it, you wouldn't like it so how dare you do it to them.

You may be thinking, I'm not listening to [REDACTED] who's telling me her own opinion, well everybody I've talked to 'tut' at the idea, moan about the idea, get angry at the idea because we won't have any natural land left on this planet if you keep going as you are. Everybody in this community are unhappy at this idea and none of us want it.

I understand the ridiculous population growth in humans and we all need somewhere to live but you need to think about the other side of the idea, the way that you are making homes for our own species but destroying homes for our wildlife.

I really hope you take the time to actually think this through and maybe change the plans and try to put a stop to it because our community will make a sigh of relief if you do stop these terrible happenings.

I am asking you to please just help our earth and please just think about the effects it's having not only to the earth, but the future generations, the world you are destroying to the next generation. Just think about your actions please.

Yours sincerely
