FAO Lewis Oliver

Your ref - APP/20/00251 HRA & Appropriate Assessment - Construction of 29x1 & 2 two bedroom apartments in a part 2 & a half / part 4 storey extension fronting onto Prince George Street together with the provision of infill flexible use (A1/A2/A3) town centre commercial units etc. North Street Arcade, North Street Arcade, Havant

Thank you for consulting us on the Habitats Regulations Assessment and Appropriate Assessment for the above application.

Natural England notes that your authority, as competent authority under the provisions of the Habitats Regulations, has undertaken an Appropriate Assessment of the proposal, in accordance with Regulation 63 of the Regulations. Natural England is a statutory consultee on the Appropriate Assessment stage of the Habitats Regulations Assessment process.

Your appropriate assessment concludes that your authority is able to ascertain that the proposal will not result in adverse effects on the integrity of any of the sites in question. Having considered the assessment, and the measures proposed to mitigate for all identified adverse effects that could potentially occur as a result of the proposal, Natural England advises that we concur with the assessment conclusions, providing all the mitigation measures are secured in any planning permission. Please see our comments on the mitigation below:

Solent recreation mitigation

Since this application will result in a net increase in residential accommodation, impacts to the coastal Special Protection Area(s) and Ramsar site(s) may result from increased recreational pressure. Havant Borough Council has measures in place to manage these potential impacts through the agreed strategic solution which we consider to be ecologically sound.

Subject to the appropriate financial contribution being secured, Natural England is satisfied that the proposal will mitigate against the potential recreational impacts of the development on the site(s). It is Natural England's view that the Solent Mitigation Recreation Strategy Contribution adequately mitigates the effects of the development on potential recreational impacts on the designated sites.

Deterioration of the water environment

The nutrient budget has been calculated in line with Natural England's Advice on Achieving Nutrient Neutrality in the Solent (version 5 June 2020). Provided the competent authority is assured and satisfied that the site areas used in the calculation are correct and that the existing land uses are appropriately precautionary, then Natural England raises no concerns with regard to the nutrient budget.

Please note the calculation is based on all wastewater from the development being treated at Budd Farm WwTW. If this situation changes, a reassessment of the nutrient calculation will be required and a revised Habitats Regulations Assessment will be necessary.

It is noted that the approach to address the positive nitrogen budget for this development is via Havant Borough Council's mitigation scheme. We welcome and support this initiative which has scope for nutrient offsetting and biodiversity gain.

Natural England has reviewed the Position Statement and Mitigation Plan for Nutrient Neutrality Development (August 2020) and Warblington Farm Study Evidence Base (Ricardo, June 2020). Natural England concurs with the

conclusion of this work that this scheme will deliver effective mitigation for developments draining to Budd's Farm WwTW and Thornham WwTW.

The nitrogen capacity of the land and proposed management of the offsetting land has been discussed and agreed. It is understood that this has been secured through legal agreements to ensure that effective mitigation is delivered for the lifetime of the development. It is also understood that a system has been set up to monitor the developments using the mitigation scheme to ensure there is capacity available for each scheme. Provided this is the case and the long term management of the mitigation scheme is monitored by the local planning authority, as competent authority, to ensure effective mitigation for the lifetime of the development, Natural England raises no further concerns.

It is for the competent authority to determine the importance of timing issues for each development, depending on location and form of mitigation applied. Given the close proximity of the mitigation land to designated sites, Natural England is not expecting any significant timing issues in this case, provided the land is brought into appropriate management at the earliest opportunity. In considering the significance of timing issues within an appropriate assessment competent authorities should take account of the average time taken from the removal of agricultural activities to first occupation and rate of completions for each development. Provided the local planning authority is satisfied that timely mitigation can be delivered in this case, Natural England raises no further comments for consideration.

Water resources and efficiency

Natural England strongly recommends that all new development adopt a higher standard of water efficiency of 100 litres/per person/day including external water use and re-use in line with Southern Water's Target 100 demand reduction programme. Consideration should be given to the use of grey water recycling systems and efficient appliances.

Please let me know if you have any queries

Kind regards

Rachael Clemson

Please send planning consultations to Natural England by email to: consultations@naturalengland.org.uk.

Natural England offers two chargeable services – The Discretionary Advice Service ([DAS](#)) provides pre-application, pre-determination and post-consent advice on proposals to developers and consultants as well as pre-licensing species advice and pre-assent and consent advice. The Pre-submission Screening Service ([PSS](#)) provides advice for protected species mitigation licence applications.
