Discharge of Conditions

Condition 3 - see scaled drawing 190103/202 Landscaping Scheme

Two plants from the same family to give a darker and lighter shade of green they will be planted alternately.

Griselinia Green Horizon Coastal Plant – max height of 120cm
Griselinia Littoralis Coastal Plant – max height of 120cm

At 120cm high it is suggested that 3 plants per metre are planted that will be a total of 30 plants.

These plants have a better survival rate if they are planted in the Autumn as they will die if planted in extreme heat and sunshine. Weather permitting, they may be planted during the summer but if too hot and dry will be beginning September.
