

Subject: Hobby Close Field - clarification of use of Lytag

Hi Daphney,

We'd like to clarify for statutory consultees concerned with the Lytag material that it would only be used in the drainage trenches as a porous material. It is not being used as general fill material to raise the land beneath the sports field. So it's use fairly focused. The general fill material being used to raise the whole field is a spent waste inert subsoil material. This is used to provide a stable surface for setting topsoil over the top.

I hope that is clear.
