Dear Mr Eaves

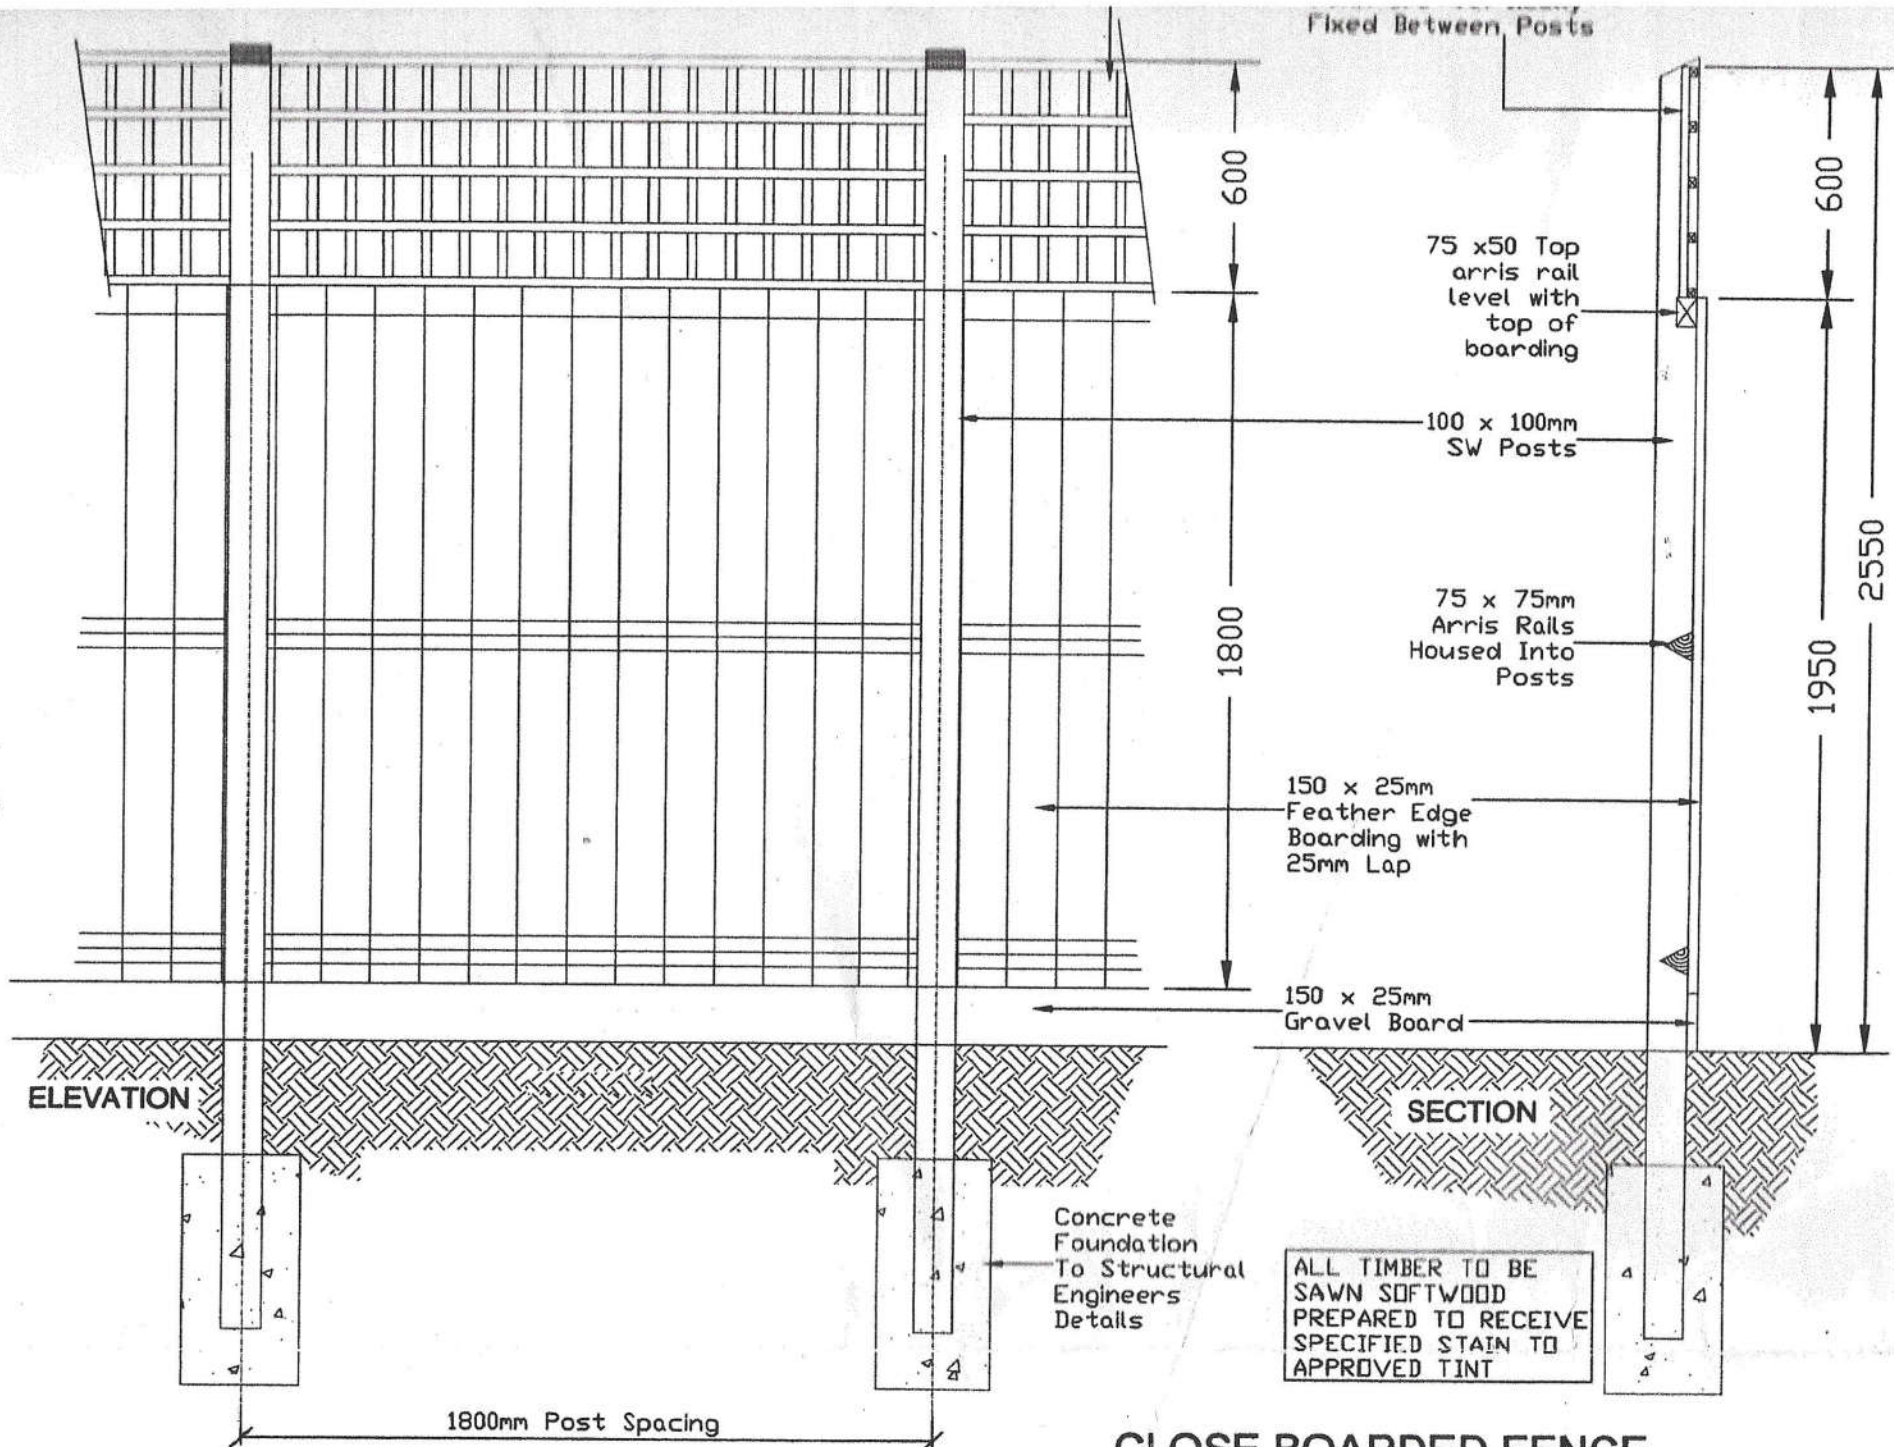

Thank you for returning my call this morning and our subsequent chat. I hope I have interpreted your requirements correctly, and I attach four documents to clarify our application: two versions of the area under discussion (these are from our latest application to show the planting info), details of the fencing, and a picture of the bin stores we are proposing to use. Each store holds two wheelie bins and we propose to purchase six units to house the twelve bins (two per flat). The units would all be bolted to each other for strength, security and safety.

Whist writing, I can confirm the two carports will be built from treated timber with the roof being made from square corrugated iron which is the same material on the existing garages. We propose the paved areas would be covered with 18" x 18" riven slabs, with the rest of the ground being tarmac laid to appropriate depths.

I hope this information is what you need but, if there is anything else, please let me know.

With kind regards.

David Aylward
