Dear Chris,

**APP/19/00083 - 77 HAVANT ROAD, HAYLING ISLAND, HAMPSHIRE
PROPOSED NEW VEHICULAR ACCESS FOR TRACTORS & GOODS VEHICLES**

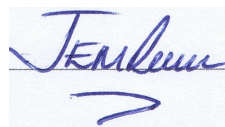

Further to our telephone call this morning, I can confirm the Vehicle Speed Measurements were carried out in accordance with TA22/81.

The speed radar used is a Bushnell 101911 Radar Gun calibrated using Stalker Tuning Forks (25mph and 40mph). The speed counts were taken from an unmarked parked vehicle, located on a private driveway at the junction of Castmans Lane and Havant Road with the location of the speed taken adjacent to the proposed access.

The sample of 120 vehicles in each direction was collected in 'free flow' conditions, i.e. if a row of 10 cars approached, only the lead vehicle was counted as it was driving at a speed of their own choice. TA22/81 recommends a vehicle count of 200 vehicles with preferred reading times between 10:00-12:00 and 14:00-16:00. The speed counts commenced at 14:15 on 9 December 2019, however by 16:15 a sample of 120 vehicles had been recorded and there was limited 'free flow' traffic as a fairly constant stream of traffic was recorded. The survey was stopped at this point.

I trust this explains the reason for the reduced number of samples, however if you require further explanation, please do not hesitate to contact me.

Yours sincerely,

J E M Rennie
