

Maria

Hope alls well with you and your managing to keep the wheels rolling

Thanks for your mail ,I've Attatched some photos of tree

The tree bifurcate at the base photo4 and one part leans heavily towards the flats photo 5

There is a basal cavity which extends at least 0.5m on the southern stem photo 2/3

and dysfunctional wood and rot on the southern side photo

This also resonates

hollow when testing with a hammer

Please contact me if you have any further queries and hope this has been of assistance

Keep happy and healthy

Many thanks

Michael Reed [07717171716](tel:07717171716)
