Interceptors Tanks for Vehicle Wash Installations

Reduce pollution and effluent charges from your car wash facility

Reduce pollution and effluent charges from your car wash facility by installing a three stage interceptor tank. Installations will prevent drains from blocking with the added advantage of free flowing oil being removed.

The lightweight interceptor tanks are manufactured from sturdy and durable glass

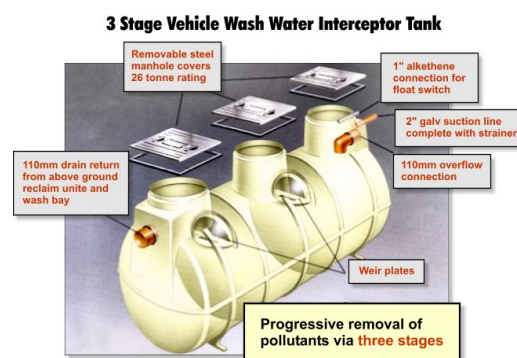

reinforced polyester (GRP) which has corrosion proof and rot proof properties. This one piece tank system, ideal for a speedy installation, can be placed in a forecourt or within a washbay and includes manhole covers (26 tonne capacity).

Water Recycling

A [water recycling system](#) can be installed, at a later date, to the connections fitted at the time of installing the interceptor tank.

A water recycling systems will present savings in water and effluent charges and has the added advantage of ensuring the car wash can still operate under a hose pipe ban during drought situations.

There are numerous interceptor tank models available with different dimensions, weight and water capacity.

	Model	Capacity (Litres)	Diameter (mm)	Length (mm)
Small	MWB 2000	2000	1250	2000
	MWB 2500	2500	1250	2400
	MWB 3000	3000	1250	2850
	MWB 3500	3500	1250	3300
Medium	MWB 4500	4500	1250	4200
	MWB 5000	5000	1500	3050
	MWB 6000	6000	1850	2700
	MWB 8000	8000	1850	3470
	MWB 10000	10000	1850	4230
	MWB 12000	12000	1850	5070

Large	MWB 15000	15000	1850	6200
	MWB 18000	18000	2500	4200
	MWB 20000*	20000	2500	4800

All Wash Bay Interceptors available in Stage 1, Stage2 and Stage 3.

*Available in extra large sizes over 20,000Litres on request

Please note: This item requires frames and manhole covers

The above requires manhole cover(s) and lid(s) (not included). Due to the weights involved covers and lids are expensive to transport and often cost more to ship than they are worth so we advise you source your own. You can purchase covers and lids from most builders merchants and below is a guide to assist you choosing the best type for the duty.

Type	Size (mm)	Duty	European Standard	↑ Loading	Typical Overground
Class A15	600 x 450	Light	BS EN 124	3 tonne (approx)	Cars/Small Vans
Class B125		Medium		17 tonne (approx)	Cars/Small Commercial
Class D400		Heavy		38 tonne (approx)	Large Commercials/HGV

PPG

The **EA and SEPA Pollution Prevention Guidelines (PPG)** which are jointly produced by the Environment Agency for England and Wales, the Scottish Environment Protection Agency, and the Environment and Heritage Service for Northern Ireland (Ref PPG3 / PPG13 / PPG4 / PPG 14) suggest that Class 2 wash bay silt traps and interceptors should be connected only to a mains foul drain, and Class 1 separators to surface drain.

The above assumes you have the consent to connect any outflow to a suitable drain as per the appropriate PPG Guideline. While we always endeavour to provide best advice and accurate information, it the responsibility of the client and/or landowner to comply with the law. Following any guideline doesn't remove your responsibility to comply with the law and prevent pollution from your activities. Causing or allowing pollution is a criminal offence; compliance with any guidance isn't a defence. You should make sure that the references to other sources of guidance are still current.
