

Dear Daphney,

Consultation: APP/20/00376 HRA & Appropriate Assessment - Retain the existing 'Fowley Cottage' dwelling and tennis court and construct nine new dwellings and garden studio.(Revised). Fowley Cottage, 46 Warblington Road, Emsworth, PO10 7HH

Thank you for consulting Natural England on the above HRA and AA. This response also covers our response to the consultation for the above application itself.

Natural England notes that your authority, as competent authority, has undertaken an appropriate assessment of the proposal in accordance with Regulation 63 of the Conservation of Species and Habitats Regulations 2017 (as amended). Natural England is a statutory consultee on the appropriate assessment stage of the Habitats Regulations Assessment process, and a competent authority should have regard to Natural England's advice.

Your appropriate assessment concludes that your authority is able to ascertain that the proposal will not result in adverse effects on the integrity of any of the sites in question. Having considered the assessment, and the measures proposed to mitigate for any adverse effects, it is the advice of Natural England that we concur with the conclusion of the HRA, provided all mitigation measures are adequately secured with any permission.

Solent Recreation Mitigation Strategy – no objection subject to mitigation

Since this application will result in a net increase in residential accommodation, impacts to the coastal Special Protection Area(s) and Ramsar site(s) may result from increased recreational pressure. Havant Borough Council has measures in place to manage these potential impacts through the agreed strategic solution which we consider to be ecologically sound.

Subject to the appropriate financial contribution being secured, Natural England is satisfied that the proposal will mitigate against the potential recreational impacts of the development on the site(s). It is Natural England's view that the Solent Mitigation Recreation Strategy Contribution adequately mitigates the effects of the development on potential recreational impacts on the designated sites.

Nutrient Neutrality – no objection subject to mitigation

Natural England is aware that your authority has adopted an interim strategy using Grampian conditions to address nutrient impacts from developments currently in the planning system and we have been working with the Council to develop this approach. It is noted that the mitigation would be secured through a Grampian condition, requiring the mitigation package to be agreed, provided to the Council and implemented prior to the occupation of the development.

Your appropriate assessment concludes that your authority is able to ascertain that the proposal will not result in adverse effects on the integrity of any of the sites in question. With regard to deterioration of the water environment, it is noted that the approach to address the positive nitrogen budget for this development is to offset against the interim strategy, with measures to ensure this approach can be adequately secured and accounted for.

It is Natural England's view that in this case, provided the Council as competent authority, is satisfied that the approach will ensure the proposal is nutrient neutral and the necessary measures can be fully secured; Natural England raises no further concerns.

Please consult Natural England on the discharge of the Grampian condition.

Construction Impacts – no objection subject to mitigation

It is noted that a CEMP will be secured with any planning permission, with some mitigation measures included in the Appropriate Assessment. Provided the CEMP includes best practice measures for dust control, pollution and surface water drainage measures during construction and measures to prevent noise, lighting and visual disturbance on the designated sites, Natural England raises no further comments.

It is also recommended that the following condition is attached to any planning permission:

Wherever possible, percussive piling or works with heavy machinery (i.e. plant resulting in a noise level in excess of 69dbAmax – measured at the sensitive receptor) should be avoided during the bird overwintering period (i.e. October to March inclusive). If such a condition is problematic to the applicant than Natural England will consider any implications of the proposals on the SPA bird interests on a case by case basis through our Discretionary Advice Service. Note: The sensitive receptor is the nearest point of the SPA or any SPA supporting habitat (e.g. high tide roosting site).

We advise that you may want to seek your own legal advice on the implications of the Sweetman II ruling and the level of detail that should be included within an Appropriate Assessment.

Surface water drainage

Due to the close proximity of the designated sites, we advise that any SuDS should be designed and installed in accordance with the requirements in the CIRIA SuDS Manual (C753).

The pollution hazard indices in the CIRIA SuDS Manual (C753) relate to 'protected waters' with regards to drinking water supply. Step 3 under Section 26.7.1 of the SuDS manual outlines that the requirement for extra treatment should be considered in relation to discharge to environmentally protected sites. It states that 'an additional treatment component (i.e. over and above that required for standard discharges), or other equivalent protection, is required that provides environmental protection in the event of an unexpected pollution event or poor system performance'.

Provided this is secured with any planning permission, Natural England raise no further comments.

If you have any queries relating to this advice, please contact me on the number below.

Kind regards,

Milena Petrovic
