

SITE SPECIFIC SUPPLEMENTARY INFORMATION

1. Site Details

Site Name:	Hambledon Road SW		Site Address:
NGR:	E:467619, N: 110174		Hambledon Road, Waterlooville, Hampshire PO7 6UR
Site Ref Number:	25501 / HVT032	SW: Macro	Upgrade

2. Pre Application Check List

Site Selection

Was an LPA mast register used to check for suitable sites by the operator or the LPA?	Yes	
If no explain why:		
Was the industry site database checked for suitable sites by the operator:	Yes	
If no explain why:		
N/A		

Pre-application consultation with LPA

Date of written offer of pre-application consultation:	19 th September 2019	
Was there pre-application contact:		No
Date of pre-application contact:	n/a	
Name of contact:	n/a	
Summary of outcome/Main issues raised:		
No comments have been received in respect to the proposal.		

Ten Commitments Consultation

Rating of Site under Traffic Light Model:	Amber		
Prior to the submission of this application the applicant initiate pre-consultation discussions with the local planning authority. This provides an opportunity for the LPA to discuss development proposals and identify site specific issues. Further consultation has also been carried out with the Ward Councillors.			
Summary of outcome/Main issues raised:			
No responses had been received at the time of submission.			

School/College

Location of site in relation to school/college:

Little Acorns pre-School is approximately 200m from the site.

Outline of consultation carried out with school/college:

Little Acorns pre-School was sent information on the proposal on the 19th Sept 19

Summary of outcome/Main issues raised:

There has been no response from Little Acorns pre-School at the time of submission.

Civil Aviation Authority/Secretary of State for Defence/Aerodrome Operator consultation (only required for an application for prior approval)

Will the structure be within 3km of an aerodrome or airfield?		No
Has the Civil Aviation Authority/Secretary of State for Defence/Aerodrome Operator been notified?		No
Details of response:		
N/A		

Developer's Notice

Copy of Developer's Notice enclosed?	Yes	
Date served:	28/11/2019	

3. Proposed Development

The proposed site:
The proposed site at Hambledon Road, Waterloooville. It is an established telecommunication installation. This submission is purely to upgrade this existing installation with new equipment to facilitate 5G coverage. The current monopole installation is being replaced however, only with a larger 5G monopole installation to facilitate significantly improved connectivity. The current 14.7m monopole is to be swapped out for a 20m installation. The sharing of base stations between multiple operators is one of the key strategic policy principles contained within the NPPF. H3G and EE have a network sharing agreement and thus these installations are fully compliant with the NPPF. It is key to consider that the ESN (Emergency Services Network) also share on EE masts and thus this installation will also be compatible for ESN. The existing site can be seen below in Figure 1, the site is located on The Meadway in close proximity to existing street furniture (street lights/traffic lights) alongside some mature trees on

both sides of the carriageway which help screen the site from several views and mitigate any visual impact of the site

Figure 1:

In keeping with the National Planning Framework (NPPF). guidelines of using high quality communications infrastructure the proposed design has been selected to minimise its visual impact upon the immediate and wider locale whilst being 5G ready for the Operators highlighted above.

The presence of the existing column sets a clear precedent for telecommunications development in this location and indicates that the principle of this proposal is acceptable in terms of siting. As stated above the National Planning Policy Framework advocates site sharing, and as such we believe that there are no sequentially preferable locations within the defined site search area.

Although it is accepted that the height and width will be increased, it is felt that such an increase in the overall bulk of the installation would not detract from the character of the area where the site is located.

Any other proposal to satisfy the identified requirement would result in the addition of a separate ground-based column elsewhere in close proximity to the existing structure. In our opinion, such a proposal would, in this instance, unnecessarily add to the clutter in this location and result in a greater visual impact.

As previously stated the proposed site is an established telecommunication installation. This submission is purely to upgrade the existing telecoms installation with new equipment to facilitate 5G coverage.

Local Planning Authority: Havant Borough Council

Development Plan: Havant Local Plan

Fig.1 – Local Plan Map (extract – reference only)

Site and its surrounds

Policy Relevant to the Development Site:

Havant Borough Local Plan (Core Strategy) March 2011 CS16 (High Quality Design) CS19 (Effective Provision of Infrastructure)
 Havant Borough Local Plan (Allocations) July 2014

Policy Analysis:

Having regard to the relevant policies of the development plan it is considered that the main issues arising from this application are:

- (i) Principle of development (ii) Impact upon the street scene (iii) Impact upon residential amenity (iv) Health Implications

(i) Principle of development

The application seeks to replace an existing telecommunications facility as part of an upgrade. The replacement mast would be shared by 2 operators.

Local and national plan policy encourages the re-use and sharing of existing telecommunications infrastructure so as to reduce excessive numbers of telecommunications masts. The proposal would therefore be acceptable in principle.

(ii) Impact upon the street scene

Planning permission is sought for a replacement telecommunications mast. It is considered the replacement of an existing facility similar in scale it is considered that the character and appearance of the area would be largely retained.

(iii) Impact upon residential amenity

The positioning and scale of the mast would not be significantly greater than the existing facility and not to a point that would result in additional harm to neighbour amenity.

(iv) Health Implications

Paragraph 45 of the National Planning Policy Framework is explicit in setting out the necessary evidence required in support of planning applications for telecommunications development, in order to justify the proposal. This should include: The outcome of consultations with organisations with an interest in the proposed development; A statement that self certifies that exposure, when operational, will not exceed International Commission on Non-Ionising Radiation Protection (ICNIRP) guidelines, and evidence that the applicant has explored the possibility of erecting antennae on an existing building, mast or other structure.

Paragraph 46 of the NPPF goes on to say: "Local planning authorities must determine applications on planning grounds. They should not seek to prevent competition between different operators, question the need for the telecommunications system or determine health safeguards if the proposal meets International Commission guidelines for public exposure."

An ICNIRP certificate has been included with the current application and would see the replacement of an existing facility, which would then be shared. The development therefore accords with the above policy requirements and would not result in an increased health risk.

Enclose map showing the cell centre and adjoining cells:

This can be emailed to the LPA on request.

Type of Structure

Description: 20m Phase 7 column

Description: It is imperative to consider from a planning perspective that this is purely an upgrade to existing installation – The structure already exists.

Top of Tower +20.0m AGL.
C/L of AAU +19.60m AGL.
C/L of AAU +18.30m AGL.
C/L of Apertures +16.60m AGL.
C/L of Apertures +14.70m AGL.
C/L of Dish +12.86m AGL.

Proposed Phase 7 Monopole C/W Wrapround Cabinet at base.

Proposed MK5 Link AC Cabinet.
Proposed 3No. H3G Cabinets.
Proposed EE Cabinet.
Proposed EE Cabinet.

Overall Height: 20.0m AGL

Height of existing building	N/A

Materials

Tower/mast etc – type of material and external	Galvanised Steel – Grey – RAL 7035
--	------------------------------------

colour:	
Equipment housing – type of material and external colour:	Galvanised Steel – Grey / Green

Reasons for choice of design:
The sharing of base stations between multiple operators is one of the key strategic policy principles contained within the NPPF. EE Ltd is the new operating company which used to be T Mobile and Orange. In keeping with the National Planning Policy Framework (NPPF). guidelines of using “high quality communications infrastructure”, the proposed design has been selected to minimise visual impact upon the street scene

4. Technical Information

ICNIRP Declaration attached	Yes	
ICNIRP public compliance is determined by mathematical calculation and implemented by careful location of antennas, access restrictions and/or barriers and signage as necessary. Members of the public cannot unknowingly enter areas close to the antennas where exposure may exceed the relevant guidelines. When determining compliance the emissions from all mobile phone network operators on the site are taken into account.		

5. Technical Justification

Reason(s) why site required
The National Planning Policy Framework clearly states that authorities should not question the need for the service, nor seek to prevent competition between operators. Notwithstanding this fact, the Applicant considers it to be important to explain the technical justification for the site and how the facility fits into the overall network. The site is required to provide enhanced coverage for EE Ltd, ESN and H3G LTE.

6. Site Selection Process – alternative sites considered and not chosen

Discounted Options
In accordance with the sequential approach outlined in the National Planning Policy Framework (NPPF) following search criteria have been utilised. Firstly, consideration is always given to sharing any existing telecommunication structures in the area, secondly consideration is then given to utilising any suitable existing structures or buildings and thirdly sites for

freestanding ground based installations are investigated.

This sequential approach is outlined below:

- a) Mast and Site Sharing
- b) Existing Buildings Structures
- c) Ground Bases Installations

In compliance with its licence and the sequential approach outlined in the NPPF all attempts to utilise any existing telecommunication structures where they represent the optimum environmental solution have been employed. The Ofcom Site Finder mast register is always examined prior to the submission of an application.

If no alternative site options have been investigated, please explain why:

This is an upgrade to existing sites thus no other standalone new facilities have been investigated. In line with the sequential site selection process this proposal is to upgrade an existing site and not a new additional mast. A new additional mast to facilitate the upgrade would not be in line with NPPF, as stated by upgrading the current facility the most sequentially preferable option has been progressed.

The current siting was agreed by the LPA as the most appropriate location when the original installation was approved by the Council. Discounted options were supplied with the original planning submission and thus the principle of the siting is already established.

7. Additional Relevant Information

Background to the Proposal

Mobile phone base stations operate on a low power and accordingly base stations therefore need to be located in the areas they are required to serve. Increasingly, people are also using their mobiles in their homes and this means we need to position base stations in, or close to, residential areas.

A further limiting factor is that the position has to be one that fits in with the existing network. Sites have to form a patchwork of coverage cells with each cell overlapping to a limited degree with the surrounding base stations to provide continuous network cover as users move from one cell to the other. However, if this overlap is too great unacceptable interference is created between the two cells.

DEVELOPMENT PLAN POLICY.

Development plan considerations have a special significance in law. Section 54A of the Town and Country Planning Act 1990 (The Act), and re-iterated in Section 38 of the Planning and Compensation Act 2004, it is stated that:

“Where in making any determination under the Planning Acts regard is to be had to the Development Plan, determination shall be made in accordance with the Development Plan unless material considerations indicate otherwise.”

NATIONAL PLANNING POLICY

The Government remain committed to promoting telecommunications and place emphasis on the importance of telecommunications to the wider economy. The National Planning Policy Framework (NPPF July 2018) sets out the Government's planning policies for England and how these are expected to be applied at the Local level. It provides a framework within which local people and their accountable Councils can produce their own distinctive local and neighbourhood plans, which reflect the needs and priorities of their communities.

The purpose of the planning system is to contribute to the achievement of sustainable development. There are three dimensions of sustainable development, each of which give rise to the need for the planning systems to perform a number of roles including;

- Economic Role – contributing to building strong, responsive and competitive economy;
- Social Role – Supporting strong vibrant and healthy communities; and
- Environmental Role – Contributing to protecting and enhancing our natural, built and historic environment.

The NPPF contains at its core a presumption in favour of sustainable development which runs through both plan-making and decision-making processes. The NPPF recognises the vital importance of high quality telecommunications and dedicates a whole chapter to this. Chapter 10 of the NPPF outlines the Governments support for high quality communications. The paragraphs below clearly outline the overarching support from Central Government for telecommunications and how Local Planning Authorities should embrace this vital infrastructure:

Paragraph 112 states:

“Advanced, high quality and reliable communications infrastructure is essential for economic growth and social well-being. Planning policies and decisions should support the expansion of electronic communications networks, including next generation mobile technology (such as 5G) and full fibre broadband connections. Policies should set out how high quality digital infrastructure, providing access to services from a range of providers, is expected to be delivered and upgraded over time; and should prioritise full fibre connections to existing and new developments (as these connections will, in almost all cases, provide the optimum solution).”

It continues in Paragraph 113

“The number of radio and electronic communications masts, and the sites for such installations, should be kept to a minimum consistent with the needs of consumers, the efficient operation of the network and providing reasonable capacity for future expansion. Use of existing masts, buildings and other structures for new electronic communications capability (including wireless) should be encouraged. Where new sites are required (such as for new 5G networks, or for connected transport and smart city applications), equipment should be sympathetically designed and camouflaged where appropriate.” Operators always follow the sequential site selection process. Where an existing site can be shared or upgraded this will always adhered to before a new proposal is put forward for consideration.

The support for telecoms and the need not to constrain Operators is laid out in Paragraph 116

“Local planning authorities must determine applications on planning grounds only. They should not seek to prevent competition between different operators, question the need for an

electronic communications system, or set health safeguards different from the International Commission guidelines for public exposure.”

Conclusion

We consider that the development is compliant with the council's policy and that in accordance with Section 38 (6) of the Planning and Compensation Act 2004 permission should be granted for the installation.

We consider the development complies with both central government and local planning policy guidance where the underlying aim is to provide an efficient and competitive telecommunication system for the benefit of the community while minimising visual impact.

Taking into account the factors of technical constraints, available sites and planning constraints we consider that this site and design clearly represents the optimum environmental solution.

On the basis of a recognised need to expand and promote telecommunications networks across the region, it is considered that the proposal fully accords with the requirements of the National Planning Policy Framework and Local Plan Policies.
