

Good morning,

We are hoping to change the use of the shop at [10 London road](#) to a sunbed shop.

The sunbeds hoping to be installed are the latest in technology, these promote safe tanning and have red light therapy lights in them meaning they help skin conditions such as acne, eczema, psoriasis and the red light can also help with issues such as arthritis and improves the health of joints in people with degenerative osteoarthritis.

No external changes are being made to the existing shop.

We are leasing the shop along with the flat above and two garages; there would be customer parking outside the garages, there is also free parking in Ladybridge public car park and public parking outside the shop along London road

The shop will be open [from 8am – 8pm](#) much shorter hours than the previous establishment when it was owned by the one stop, the sunbeds produce no noise or smell issues and the building will be well ventilated in accordance to the sunbed association laws and the shop fitters who regularly deal with designing and fitting sunbeds in shop in accordance to regulations. We will have 2 full time staff and 4 part staff working but only one at a time and customers will be in the shop for no more than 30 minutes.

Many of our customers will be within walking distance and we feel the shop will benefit the local businesses too bringing custom to the other shops in the vicinity
