

Capture activities to take place during the demolition of the property, a pre-works survey of the property comprising an internal (if safe) and external survey will be undertaken by a licensed bat ecologist on a cherry picker and using an endoscope and searching features for signs of bats. Any bats encountered will be carefully removed and placed into the permanent replacement bat boxes. A bat worker will remain on site while all potential roosting features are removed by hand under the ecological watching brief and any bats encountered being relocated to the bat boxes. Any injured bats will be taken into care immediately (as directed by the Batworker's Manual, s.7.3, pp. 64-66; 3rd ed.2004).
