

Para 7 of Application: Identification of Trees and Description of works continued:

1. In approx. 2008 an area of land had been sold of at the rear of No 134 London Road, in which the land acquired will allow development of further housing in Mountbatten Dive, Waterlooville. These houses can be seen in the first picture behind the Beech tree.
2. Subsequently it appears that Havant Borough Council presumably as a result of Planning permission attached a Tree Preservation Order NO 1899 on this Beech tree.
3. Post of the development planning permission was sought to reduce this tree sometime in 2008/9 the exact date is not known, permission to reduce the tree had been given by Havant Borough Council but the works were never carried out, so effectively this tree has never had any type of reduction on it and has thus grown to a considerable size breeching the neighbours boundary. This application seeks to re-apply for that permission some 10 years later at least, but that it is sought as the limbs have grown in a lateral plain and vertical plain across the entire canopy which does not allow a climber to safely work at the extremities of the crown or lateral branches.
4. Permission is sought to therefore to return the tree to a shape consistent with BS3998(2010) where possible and Fig 1 shows the approximation of the shape needed. Permission is sought to reduce the crown by 4 mtrs, all lateral growth by approx. 4mtrs on the Northern side, approx. 3 mtrs on Southern side, approx. 2.5mtrs on the East and West facing limbs. Thin out epicormic growth 360° that occurs within the canopy allowing for the density to be reduced. Please note it is practically impossible for a climber's weight to be supported in any less measurements, especially when anchored into the highest growth point that will safely support his weight and movement throughout the canopy.
5. Because of the limbs growing over the neighbour's garden permission is sought to reduce the lateral growth on that side to within 1 mtr of the boundary of No 134's rear garden and when looking from the house to the tree the balance must be maintained as the other side will be allowing growth to occur due to the arc of the sun and will be reduced to take this into account.

Log Off Tree Surgeons (LOTS285)

Reduction of 1 off Beech Tree

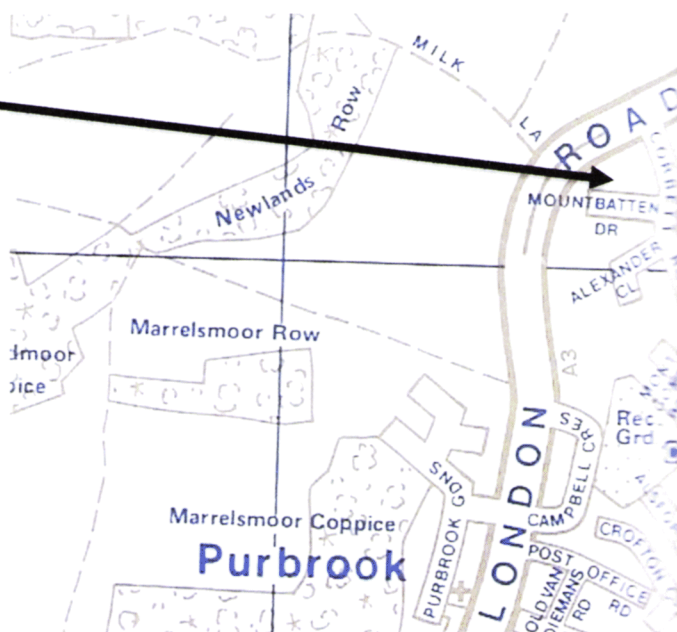

134 London Road – Waterlooville – PO7 5EW

HAVANT BOROUGH
COUNCIL

30 MAY 2019

RECEIVED

Rear Garden of above
property, 1 Off Beech
tree.

Tree location

Approximation of the shape needed, reduce the crown by 4 mtrs, all lateral growth by approx. 4mtrs on the Northern side, approx. 3 mtrs on Southern side, approx. 2.5mtrs on the East and West facing limbs. Please note it is practically impossible for a climber's weight to be supported in any less measurements, especially when anchored into the highest supported growth point.

Requirement to perform a boundary trim approx. 1mtr into the garden of No 134 as it overhangs their neighbours garden, thus bringing this back into line exercising the care of duty they must have over the neighbour's garden.
