## Commercial Kitchen Design and Installation

To whom it may concern

Please find attached on this email the specification sheets for all items that have been installed on site address below.

Grillshack  
14 Market Place  
Havant  
Hampshire  
PO9-1QF

The work carried out was to install a new fan 500mm S+P Twin a ESP 3000 for Odour along with a Electronic Ozone injection system for added Odour removal.

Installed was a Jet cowl with Efflux Velocity on a 90D Bend. This was all approved by the council.

Once our engineers had completed the fitting of new equipment ready for the electrician to wire it all up.

A few days later one of our technicians had to return to site to correct the faults the electrician had made with the wiring of the equipment this was completed and the technician ran the system for 30-45 minutes checked the whole system for leakage etc all systems were found to be working up to standard.

Kind regards
