

Parking Survey

39 Vian Road
Waterlooville
Hampshire

Survey

The parking site survey has been conducted over the course of two weeks. The method of calculating parking spaces has been to ensure each parallel parking region is 6 x 2.4m and 4.8m x 2.4m for any end of bay spaces. Spaces which are opposite to a counted spot have been ignored due to narrow roads allowing for traffic flow as well as emergency vehicle access.

Available Parking Space Survey Tally																
	15-May	16-May	17-May	18-May	19-May	20-May	21-May	22-May	23-May	24-May	25-May	26-May	27-May	28-May	29-May	AVERAGE
AM	8	7	6	4	x	5	8	5	8	7	x	6	5	8	9	6.615385
PM	8	4	4	5	x	5	6	5	7	8	x	3	6	8	3	5.538462

Conclusion:

The carried out survey has revealed that the site does have sufficient capacity for accommodating one additional vehicle within close proximity to our site. Out of 19 spaces in total, 13 can be utilized at the same time without any distribution caused to the traffic flow.

On average there was an average stress level of 53.8% in the morning and an average of 61.6% in the evening. With an addition of a proposed car parking area, the parking stress level would raise to 61.6% in AM hours and 69.2% in PM hours.
