Proposal: Erection of 2 No.2 bed dwelling houses with associated parking. (Revised application).

Location: Land adj. 93 Winterslow Drive, Havant, PO9 5DZ

Deterioration of the water environment

With regard to the integrity of the designated sites, we advise that there is currently uncertainty as to whether the increase in waste water from new housing in the Solent catchment will have an adverse effect on the international sites.

There is existing evidence of high levels of nitrogen and phosphorus in the Solent water environment with evidence of eutrophication at some designated sites. The Partnership for Urban South Hampshire (PUSH), Natural England (NE), and Environment Agency (EA) have been jointly working to develop an Integrated Water Management Strategy (IWMS). This examines the potential for the PUSH region to accommodate future housing growth without having a detrimental effect upon the water environment. A Water Quality Working Group has been set up to identify and analyse the existing evidence gaps and evaluate the need for strategic mitigation measures. However, there is currently uncertainty as to whether there is sufficient capacity to accommodate the new housing growth.

The proposal comprises new housing development and has inevitable waste water implications. It is Natural England's view that these implications, and all other matters capable of having a significant effect on designated sites in the Solent, must be addressed in the ways required by Regulation 63 of the Conservation of Habitats and Species Regulations 2017.

It is Natural England's view that there is a likely significant effect on the internationally designated sites (SPA, SAC, pSPA) due to the increase in waste water from the new housing. As you are aware, where there is a likelihood of significant effects (excluding any measures intended to avoid or reduce harmful effects on the European site), or there are uncertainties, a competent authority should fully assess (by way of an "appropriate assessment") the implications of the proposal in view of the conservation objectives for the European site(s) in question. Appropriate assessments cannot have lacunae and must contain complete, precise and definitive findings and conclusions capable of removing all reasonable scientific doubt as to the effects of the works proposed on the protected site concerned. Complete information is required to ensure that the proposal will not affect the integrity of the international sites.

Natural England advises that the waste water issue is examined within the appropriate assessment and that the existing nutrient and conservation status of the receiving waters be taken into account. LPAs will be aware of recent CJEU decisions regarding the assessment of elements of a proposal aimed toward mitigating adverse effects on designated sites and the need for certainty that mitigating measures will achieve their aims. The achievement of nutrient neutrality, if scientifically and practically effective, is a means of ensuring that development does not add to existing nutrient burdens. Natural England has prepared a methodology setting out how this can be achieved and this is attached for your information. It is appreciated that this may be difficult for smaller developments or developments on brownfield land. Natural England has advised that your authority set up an interim approach that developments can contribute to thereby ensuring that this uncertainty is fully addressed by all applications. Natural England is working closely with affected local planning authorities to help address this issue. Natural England can also provide further advice to the applicant on mitigation options under our [Discretionary Advice Service](#).

Please note we advise that the competent authorities to whom Natural England gives its statutory advice on the environment will need to seek and rely upon their own legal advice on the interpretation of the Habitats Regulations and case law.

Solent Recreation Management Strategy – No objection subject to mitigation

This application is within 5.6km of Chichester and Langstone Harbours SPA and will lead to a net increase in residential accommodation. Natural England is aware that Havant Borough Council has adopted a Supplementary Planning Document (SPD) or planning policy to mitigate against adverse effects from recreational disturbance on the Solent SPA sites, as agreed by the Solent Recreation Mitigation Partnership (SRMP).

Provided that the applicant is complying with the SPD or policy and the requirement for Appropriate Assessment under The Conservation of Habitats and Species Regulations (as amended 2017). Natural England are satisfied that the applicant has mitigated against the potential adverse effects of the development on the integrity of the European site(s), and has no objection to this aspect of the application.

Species and Biodiversity Enhancement

Natural England refer your authority to our national standing advice for protected species. As standing advice, it is a material consideration in the determination of the proposed development in this application in the same way as any individual response received from Natural England following consultation and should therefore be fully considered before a formal decision on the planning application is made.

It is a requirement of all development to enhance the natural environment, as stated in the NPPF (2018 as amended), paragraph 109. Natural England recommend that an appropriate level of enhancement, such as the addition of bat boxes and/or bird boxes, are secured as part of this application.
