Redland Renown Concrete Tiles are a popular choice amongst those in search of a clean, low profile roof tile that will blend into the existing beauty of their property. Whilst providing a contemporary style, these Redland tiles provide incredible durability as a result of vigorous testing and unique manufacturing techniques.

Redland Renown Roof Tiles are suitable on pitches between 17° and 90°, dependent upon the finish. These finishes include smooth and granular, which are themselves available in as many as six beautiful colours. This makes these concrete roof tiles ideal for a wide variety of roofing projects, especially where the aesthetics must match those of adjacent buildings.

Renown Tiles are widely recognised for their incredible durability and ability to stand the test of time. As evidence of their quality, these roof tiles have been rigorously tested under extreme weather conditions and have proven their ability to withstand driving rain with ease. These Redland tiles are also responsible for being the most durable roof tiles in the industry.
