Dear Mrs Haywood,

Planning consultation: Construction of 1No. 1bed dwelling with associated refuse and cycle storage, parking and landscaping.

Location: Land adj. 1 Dockenfield Close, Havant, PO9 3ST

Thank you for your consultation on the above dated 03 October 2018 which was received by Natural England on 03 October 2018

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

SUMMARY OF NATURAL ENGLAND'S ADVICE

DESIGNATED SITES [EUROPEAN] – FURTHER INFORMATION REQUIRED

Since this application will result in a net increase in residential accommodation, impacts to the coastal Special Protection Area(s) and Ramsar Site(s) may result from increased recreational disturbance.

Your authority has measures in place to manage these potential impacts through the agreed strategic solution which we consider to be ecologically sound. Subject to the appropriate financial contribution being secured, Natural England is satisfied that the proposal will mitigate against the potential recreational impacts of the development on the site(s).

Notwithstanding this, Natural England's advice is that this proposed development, and the application of these measures to avoid or reduce the likely harmful effects from it, may need to be formally checked and confirmed by your Authority, as the competent authority, via an appropriate assessment in view of the [European Site's conservation objectives](#) and in accordance with the Conservation of Habitats & Species Regulations 2017.

This is because Natural England notes that the recent [People Over Wind Ruling](#) by the Court of Justice of the European Union concluded that, when interpreting article 6(3) of the Habitats Directive, it is not appropriate when determining whether or not a plan or project is likely to have a significant effect on a site and requires an appropriate assessment, to take account of measures intended to avoid or reduce the harmful effects of the plan or project on that site. The ruling also concluded that such measures can, however, be considered during an appropriate assessment to

determine whether a plan or project will have an adverse effect on the integrity of the European site. Your Authority should have regard to this and may wish to seek its own legal advice to fully understand the implications of this ruling in this context.

Natural England advises that it is a matter for your Authority to decide whether an appropriate assessment of this proposal is necessary in light of this ruling. In accordance with the Conservation of Habitats & Species Regulations 2017, Natural England must be consulted on any appropriate assessment your Authority may decide to make.

Sites of Special Scientific Interest Impact Risk Zones

The Town and Country Planning (Development Management Procedure) (England) Order 2015 requires local planning authorities to consult Natural England on “Development in or likely to affect a Site of Special Scientific Interest” (Schedule 4, w). Our SSSI Impact Risk Zones are a GIS dataset designed to be used during the planning application validation process to help local planning authorities decide when to consult Natural England on developments likely to affect a SSSI. The dataset and user guidance can be accessed from the data.gov.uk website

Further general advice on the consideration of protected species and other natural environment issues is provided at Annex A.

We would be happy to comment further should the need arise but if in the meantime you have any queries please do not hesitate to contact us.

For any queries regarding this letter, for new consultations, or to provide further information on this consultation please send your correspondences to consultations@naturalengland.org.uk.

Yours sincerely

Ben Newton
Consultations Team

Natural England offers the following additional advice:

Landscape

Paragraph 109 of the National Planning Policy Framework (NPPF) highlights the need to protect and enhance valued landscapes through the planning system. This application may present opportunities to protect and enhance locally valued landscapes, including any local landscape designations. You may want to consider whether any local landscape features or characteristics (such as ponds, woodland or dry stone walls) could be incorporated into the development in order to respect and enhance local landscape character and distinctiveness, in line with any local landscape character assessments. Where the impacts of development are likely to be significant, a Landscape & Visual Impact Assessment should be provided with the proposal to inform decision making. We refer you to the [Landscape Institute Guidelines for Landscape and Visual Impact Assessment](#) for further guidance.

Protected Species

Natural England has produced [standing advice](#)¹ to help planning authorities understand the impact of particular developments on protected species. We advise you to refer to this advice. Natural England will only provide bespoke advice on protected species where they form part of a SSSI or in exceptional circumstances.

Environmental enhancement

Development provides opportunities to secure a net gain for nature and local communities, as outlined in paragraphs 9, 109 and 152 of the NPPF. We advise you to follow the mitigation hierarchy as set out in paragraph 118 of the NPPF and firstly consider what existing environmental features on and around the site can be retained or enhanced or what new features could be incorporated into the development proposal. Where onsite measures are not possible, you may wish to consider off site measures, including sites for biodiversity offsetting. Opportunities for enhancement might include:

- Providing a new footpath through the new development to link into existing rights of way.
- Restoring a neglected hedgerow.
- Creating a new pond as an attractive feature on the site.
- Planting trees characteristic to the local area to make a positive contribution to the local landscape.
- Using native plants in landscaping schemes for better nectar and seed sources for bees and birds.
- Incorporating swift boxes or bat boxes into the design of new buildings.
- Designing lighting to encourage wildlife.
- Adding a green roof to new buildings.

You could also consider how the proposed development can contribute to the wider environment and help implement elements of any Landscape, Green Infrastructure or Biodiversity Strategy in place in your area. For example:

- Links to existing greenspace and/or opportunities to enhance and improve access.
- Identifying opportunities for new greenspace and managing existing (and new) public spaces to be more wildlife friendly (e.g. by sowing wild flower strips)
- Planting additional street trees.
- Identifying any improvements to the existing public right of way network or using the opportunity of new development to extend the network to create missing links.
- Restoring neglected environmental features (e.g. coppicing a prominent hedge that is in poor condition or clearing away an eyesore).

Access and Recreation

Natural England encourages any proposal to incorporate measures to help improve people's access to the natural environment. Measures such as reinstating existing footpaths together with the creation of new footpaths and bridleways should be considered. Links to other green networks and, where appropriate, urban fringe areas should also be explored to help promote the creation of wider green

¹ <https://www.gov.uk/protected-species-and-sites-how-to-review-planning-proposals>

infrastructure. Relevant aspects of local authority green infrastructure strategies should be delivered where appropriate.

Biodiversity duty

Your authority has a [duty](#) to have regard to conserving biodiversity as part of your decision making. Conserving biodiversity can also include restoration or enhancement to a population or habitat. Further information is available [here](#).
