Subject: Revised tree information - 19 Westbourne Avenue Emsworth

To: Maria Stewart

Further to your recent comments and our telephone conversation I attach the following;

- arboricultural impact appraisal and method statement;
- tree survey and protection plan

Both of the above now at Revision A December 2018. In addition I attach a drawing from Green Grid Systems reference no. GGS – 061201.

These items reflect the following which I consider fulfil your request for additional detail:

Green Grid drawing GGS – 061201

This drawing shows the extent of the RootBridge system across the existing shrub bed. The proposal is to use components of the RootBridge system to construct both the garage foundation and the access to it. In addition, the drawing shows at section A-A the cross section detail of the access, sloping down to meet the existing drive. Section B-B shows the cross section detail of the garage foundation. The remaining section shows the cross section of any other areas of RootBridge install.

Arboricultural impact appraisal (AIA) and method statement (AMS)

As a result of the Green Grid drawing I have amended with the following;

- additional paragraphs (34 and 35) which references the Green Grid drawing GGS – 061201 and states that construction shall be in accordance with both the tree survey and protection plan (TSP) and GGS-061201;
- additional paragraph (37) addressing minor incursion into RPA of T3.
- Amendments to phasing.

I note your comments regarding a method statement for install of RootBridge. This was included in the report originally and is still included at paragraphs 127-133. I have noted the sections where the detail has been provided by Green Grid Systems.

Tree survey and protection plan (TSP)

As a result of the Green Grid drawing I have amended with the following;

- annotation to cross reference to Green Grid drawing GGS – 061201;

In addition I have included full details of the ash (off site) and willow as requested. There is a small encroachment of build (predominantly patio) into the plotted RPA of the willow, however this is minor.

I trust the attached information now allows you to fully support the scheme and, where applicable, attach suitably worded conditions in respect of information provided.

Once again thank you for your assistance in this matter.

Regards
