Attachments: Garden buildin planning letter.pages.pdf

Dear Jacky,

I attach a note giving the background to the erection of the garden building to include in my application.

I have done some re-measuring. At the highest point of the underlying ground, which is the datum for height measurements, the building is 170 mm above ground level so that dimension should be used as a substitute for the 100 mm support height shown on the architectural drawing rather than 250 mm. However, the maximum height shown appears to be to the top of the roof boards; the insulation and shingles contribute about a further 25 mm. Therefore the overall installed height is 2600 ($= 2505 + 170 - 100 + 25$) mm.

Yours sincerely,

Duncan Eckford
