

APP/18/01279

St Catherine's Court, 390 Sea Front, Hayling Island.

Application Request

Reduce top and all sides to 7No. Holm Oak trees by 1-1.5m, subject to TPO 1388 within G1.

Recommendations

That the seven trees in TPO 1388 Group 1 and one Individual tree TPO 1388 (OS ref SZ 470389, 099219, TBWA Ref #9) have their canopies reduced to 2.4m from the ground, as per the boundary hedge.

That the boundary hedge be treated for the rust disease.

Commentary

All the trees and hedges at St Catherine's Court were examined and are listed and shown on the map of trees at St Catherine's in Appendix 1. The Treezilla report for these trees indicates that they have stored carbon dioxide to date is 12,366kg with a value of £798 and an annual contribution to the environment of £1097 (see Appendix1).

The outline of TPO Group 1 as shown on the HBC map is visible on the Google satellite view, however it would appear that one of the two trees next to G1 has had its crown reduced (#9 ref on the HBTW listing) and the other (#8 on the HBTW listing) is said to be a Turkey oak.

All the trees are in a good condition, though one (#10 on the HBTW listing) is exposed to sea drift and the crown is affected. The boundary hedge has rust.
