2-3ft Tall

These are BARE ROOTED plants which can be planted from the end of October until May and will be dispatched as soon as the weather turns cold and they become dormant.The dispatch date depends on the Autumn temperature and varies from year to year.

A vigorous evergreen shrub with oval-shaped bright shiny green leaves.It forms a dense hedge of any height on most soils but not shallow chalk and will give up to 60cm growth each year.

Growing Details:

Common Name: Cherry laurel
Genus: Prunus
Species: laurocerasus rotundifolia
Skill Level: Beginner
Exposure: Full sun, Partial shade
Hardiness: Hardy
Soil type: Well-drained/light, Dry
Height: 4m
Spread: 1.5m

Description

If not clipped the plants will reach 4 metres.widely planted as an ornamental plant in temperate regions worldwide, and has become naturalised widely in some areas. It is often used for screening, and also as a mass landscape and ground cover plant. Most forms are tough shrubs that can cope with difficult growing conditions (including shaded and dry conditions), and which respond well to pruning. The foliage is also used for cut greenery in floristry.
