

Perforated Shutters

PHYSICAL PROTECTION

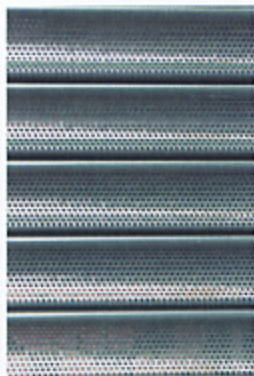

Owners of retail premises face a significant dilemma - seeking protection from the tide of wanton damage and burglary, whilst wishing to remain attractive and welcoming. That's why SECOM's Perforated Shutters are the perfect solution. Unobtrusive yet secure, they provide protection without resorting to the 'fortress' image that often seems to encourage vandalism.

Electrically or manually operated, our perforated lath shutters offer both visibility and potent security. And

because we manufacture all our physical protection products in-house, we can tailor discrete, innovative solutions that exactly match your needs.

As the UK's leading security company, part of a multi billion pound group, we are the only security specialist that covers the whole security spectrum. That's everything from physical protection products, to electronic monitoring of your alarm systems. The Quality Service Provider.

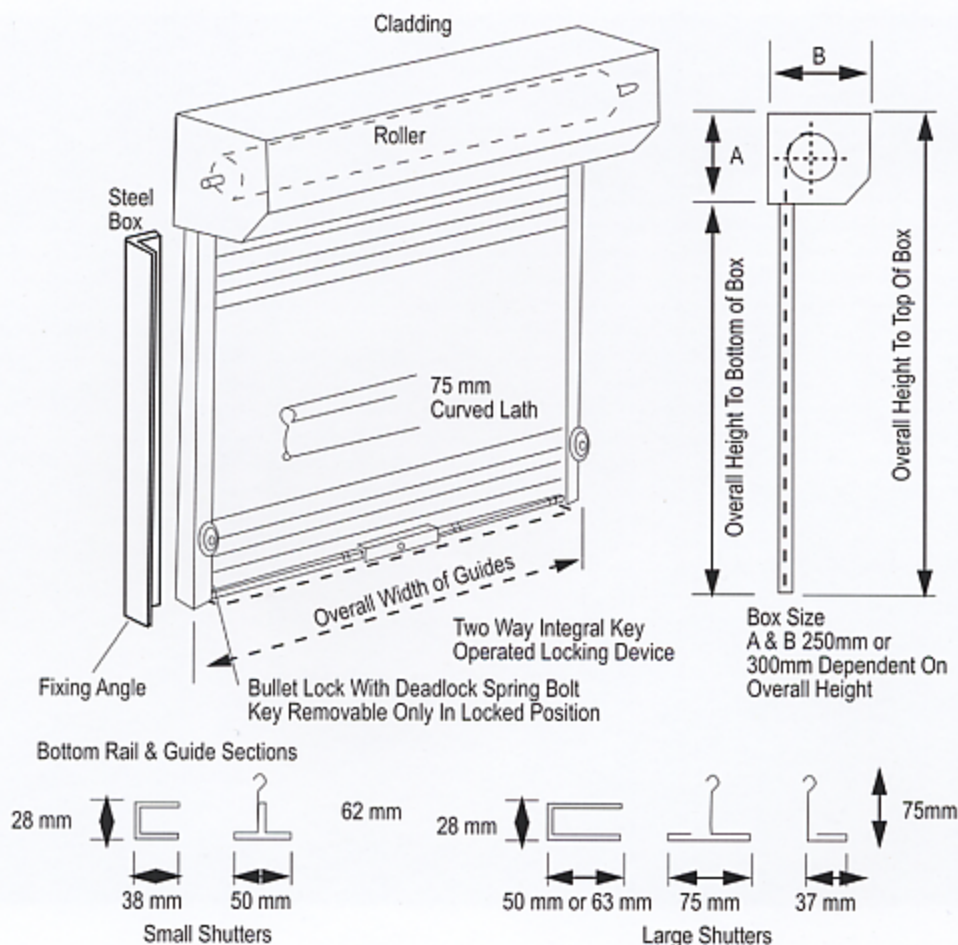

- Easy on the eye
- Tailored protection
- Visible yet secure

SECOM

The quality service provider

A closer look hand made to your specifications

The Shutters are manufactured using 75mm traditional curved galvanised steel lath. This is perforated to allow visibility through the curtain.

The shutters can be manually operated using spring balanced rollers and secured by either an integral key operated locking system mounted on the

bottom rail or bullet locks fixed to the guides. Alternatively, the Roller shutter can be electrically operated via various control methods.

The roller is encased in a steel box cladding and all steelwork is generally finished polyester powder coated to a range of BS or RAL stock colours.

All can be finished to a colour of your choice.
