Dear Andrew Biltcliffe

Thank you for your enquiry dated Thursday, 30 November 2017

Thank you for using the linesearchbeforeudig.co.uk system for your 'Planning Application/Property Conveyance' enquiry for SGN asset maps for your site location.

Please note this response and any attached map(s) are only valid for 28 days.

There are high pressure pipelines in the vicinity of your proposed work area. SGN formally object to this planning application until such time as a detail consultation has taken place.

For your safety, it is essential that no work or crossing of this high pressure pipeline is carried out until a detailed consultation has taken place.

This response is for initial/scoping out work only. This response does not give permission to undertake any work.

When works on site are due to start, another request for information and updated maps must be made via our on-line system as a 'planned works' enquiry.

Please find an extract from our mains records for your search area, any SGN assets are described in the map legend. On some occasions maps may be sent that do not contain any gas pipes, this is due to the location of your proposed work area within our depot/office boundaries. Please note there may be additional gas pipes (low pressure, medium pressure, etc.) shown on the mains record.

This mains record only shows the pipes owned by SGN in our role as a Licensed Gas Transporter (GT). Please note that privately owned gas pipes or pipes owned by other GTs may be present in this area and information regarding those pipes needs to be requested from the owners. If we know of any other pipes in the area we will note them on the plans as a shaded area and/or a series of x's.

The information shown on this plan is given without obligation or warranty and the accuracy cannot be guaranteed. Service pipes, valves, siphons, stub connections etc. are not shown but their presence should be anticipated. Your attention is drawn to the information and disclaimer on these plans.

There should be no mechanical excavations taking place above or near the gas main. You should confirm the exact position of the main using hand dug trial holes.

A colour copy of these plans and the gas safety advice booklet enclosed should be passed to the senior person on site in order to prevent damage to our plant and potential direct or consequential costs to your organisation.

Safe digging practices in accordance with HSE publication HSG47 "Avoiding Danger from Underground Services" must be used to verify and establish the actual position of the mains, pipes, services and other apparatus on site before any mechanical plant is used. It is your responsibility to ensure that this information is provided to all relevant people (direct labour or contractors) working for you on or near gas pipes.

It must be stressed that both direct and consequential damage to gas plant can be dangerous for your employees and the general public and repairs to any such damage will incur a charge to you or the organisation carrying out work on your behalf. Your works should be carried out in such a manner that we are able to gain access to our apparatus throughout the duration of your operations.

If you require any further information please do not hesitate to contact us.

Yours sincerely,

The Safety Admin Team
