EP1 Pond Edge Mixture (Sow at 40kg/hectare or 4g/m2)

Composition:
Ermongate EP1 (or similar approved) contains wild flowers and grasses suitable for sowing at the wet margins of ponds, streams and ditches.

Wild Flowers (20%)

% Latin name

0.4 Achillea ptarmica

2 Angelica sylvestris

0.2 Catha palustris

0.5 Eupatorium cannabinum

2.4 Filipendula ulmaria

4 Iris pseudacorus

0.5 Lotus pedunculatus

1 Lycopus europaeus

1.5 Lythrum salicaria

3 Ranunculus acris

0.3 Scrophularia auriculata

0.5 Silene flou-cuculi - (Lychnis flou-cuculi)

0.2 Succisa pratensis

1 Thalictrum flavum

2 Viola cracca

Common name

Wild Angelica

Marsh Marigold

Hemp Agrimony

Square-stalked St John's Wort

Yellow Iris

Greater Birdfoot Trefoil

Gypswort

Purple Loosestrife

Meadow Buttercup

Water Figwort

Devil's-bit Scabious

Common Meadow-rue

Tufted Vetch

Grasses (80%)

% Latin name

12 Agrostis capillaris

5 Alopecurus pratensis

1 Anthoxanthum odoratum

36 Cynosurus cristatus

1 Deschampsia cespitosa

25 Festuca rubra

Common name

Common Bent

Meadow Foxtail (w)

Sweet Vernal-grass (w)

Crested Dogtail

Tufted Hair-grass (w)

Slender-creeping Red-fescue

EM9F Wild Flowers for Wetlands (Sow at 15kg/hectare or 1.5g/m2)

Composition:
Ermongate EM9F (or similar approved) contains wild flower species suitable for seasonally wet soils and is based on the vegetation of traditional water meadows. Soils in wet meadows may flood for short periods in winter, but are usually well drained in summer.

Wild flowers (100%)

% Latin name

2.5 Achillea millefolium

2.5 Betonica officinalis - (Stachys officinalis)

5 Centaurea nigra

5 Filipendula ulmaria

9 Galium verum

7.5 Leucanthemum vulgare

1.5 Lotus pedunculatus

1.5 Plantago lanceolata

5 Primula vers

10 Prunella vulgaris

15 Ranunculus acris

8 Rhinanthus minor

6 Rumex acetosa

7.5 Silaum silaus

1.5 Silene flou-cuculi - (Lychnis flou-cuculi)

1 Succisa pratensis

9 Viola cracca

Common name

Yarrow

Betony

Common Knapweed

Meadowsweet

Lady's Bedstraw

Oxeye Daisy

Greater Birdfoot Trefoil

Ribwort Plantain

Cowslip

Selfheal

Meadow Buttercup

Yellow Rattle

Common Sorrel

Pepper Savillage

Ragged Robin

Devil's-bit Scabious

Tufted Vetch

EM1 Basic General Purpose Meadow Mixture (Sow at 40kg/hectare or 4g/m2)

Composition:
EM1 Basic General Purpose Meadow Mixture is a simple low cost meadow mixture suitable for a wide range of soil types. The wild flowers are robust and showy, and the grasses are fine and slow growing.

Wild Flowers (20%)

% Latin name

0.5 Achillea millefolium

0.5 Centaurea nigra

1 Daucus carota

2 Galium verum

2 Leucanthemum vulgare

3 Poterium sanguisorba - (Sanguisorba minor)

2.5 Prunella vulgaris

0.5 Rumex acetosa

2.5 Silene dioica

2 Silene vulgaris

Common name

Yarrow

Common Knapweed

Wild Carrot

Lady's Bedstraw

Oxeye Daisy

Salad Burnet

Selfheal

Meadow Buttercup

Common Sorrel

Red Campion

Bladder Campion

Grasses (80%)

% Latin name

8 Agrostis capillaris

4 Cynosurus cristatus

28 Festuca rubra

4 Phleum bertolonii

Common name

Common Bent

Crested Dogtail

Slender-creeping Red-fescue

Smaller Cat's-tail

PLANTING SPECIFICATION

EXISTING TREES AND SHRUBS

Where existing trees & shrubs are to be retained they should be subject to a full structural inspection by a suitably qualified person prior to any work commencing in accordance with BS 3986 (2013) 'Tree Work - Recommendations', and should be fully insured off prior to the commencement of any work in accordance with Figure 2 (20) at the full extent of the root protection area, as determined by section 4 (4) (5) (3) and Annex C (3) (4) (5).

No storage of materials, disposal of rubbish, site fees, spillage of oil and chemicals, ground compaction, excavation or changes in level shall be carried out within existing tree / hedge canopies.

New shrub planting pits below existing trees to be hand dug to avoid conflict with tree roots. Avoid increasing ground levels below existing trees. Free-draining, neutral acidity topsoil (pH 6.5 with a high sand content), should be employed to achieve the minimum 450mm depth growing medium.

PLANTING

All plants and planting to comply with the requirements of all current / relevant British Standard specifications including BS 3083: Part 1 (1992), Part 2 (1996) and Part 4 (2007) and BS 4361 (1989) where applicable, BS 4428 (1989). All plants to be supplied in accordance with the plant schedule. Any plant material planted outside the recognised planting season (Nov-Feb), to be containerised stock and supplied at the sites specified.

TREE PLANTING

A suitable method of foundation allowing for existing ground conditions is to be provided to accommodate the proposed tree planting. All trees are to be planted as shown ensuring a minimum of 5 metres from buildings and 3 metres from drainage and services. Where necessary, root barriers to be installed (Super Greenflex Urban Ltd or equal approved), as recommended by structural engineer. Allow for the use of container grown stock during the period 1 April to 31 October, and field grown stock from 1 November to 31 March.

NOTE: BELOW GROUND PREPARATION OF ALL TREE PITS IS TO BE AGREED WITH LOCAL AUTHORITY TREE OFFICER PRIOR TO INSTALLATION, WHERE TREES ARE PLANTED WITHIN OR DIRECTLY ADJACENT HARD PAVED AREAS, SUFFICIENT FOOTING VOLUME MUST BE PROVIDED INCLUDING (IF RECD) THE USE OF A MODULAR CELL STRUCTURE SUCH AS SILVEXCEL (OR EQUAL APPROVED)

TOPSOIL REQUIREMENTS

To BS 3882 (2015) 'Specification for topsoil as qualified by full contract specification. All areas shall be cultivated to a minimum depth of 150mm. Full weed, rubbish and stones over 20mm gauge shall be removed. Earth to be rolled as required and raked in final direction. Apply to all newly planted areas (except wildflower / meadow planting), to manufacturer's recommendations where appropriate.

Heavy standard tree pits - 150mm dia, x 900mm depth
Shrub / hedge planting beds - 450mm depth
Grass areas - 150mm depth

Where necessary increase tree pit dimensions to ensure that tree pits are at least 75mm deeper and 150mm wider than rootball. Break up bottom of pit to a depth of 150mm. Compacted placed sides of pits should be roughened. Full analysis of existing and imported topsoil required prior to use.

TOPSOIL IMPROVEMENTS

Applied to all newly planted areas, to manufacturers' recommendations where appropriate:

- Incorporate 75mm depth of soil conditioner into topsoil during cultivation.
- Incorporate Erimag CRF granular fertilizer at approx 140g per pit to standard tree pit and backfill and 70g per pit to structural / ornamental shrub planting.
- Watering - supply min. 54 litres / tree & 4.5 litres / shrub at planting.
- Mulch - After weeding and watering, lightly fork over planted areas before applying a min. 75mm depth 50-100mm grade bark mulch. Ornamental bark to consist of predominantly matured British Pine Bark with an even central particle size distribution of 2-50mm with 0% dust & fines & less than 5% wood content. The product shall be peat, disease & weed free & not have been treated with Malathion Bromide or any additives. The product shall have been tested in accordance with the requirements of BS 4709:1987 for resistance.
- Geotextile membrane to be installed between topsoil and back mulch, with min. 200mm overlap and holes cut for planting. Sufficient pegs to be installed to prevent membrane from being. Main Contractor to ensure back mulch is retained in place on sloping ground.

PLANT MATERIAL TREATMENT

All to be British grown stock and fully hardened off.

Root Dip: Proprietary Root Dip applied to all bare rooted stock (1) at time of lifting at nursery, and (2) prior to planting.

Anti-Desiccant: Proprietary anti-desiccant to be applied to foliage of all containerised / rootballed material in final specimen containers and evergreens etc. (1) prior to transportation and (2) during any delay in planting.

Pruning: Allow for pruning of all deciduous trees and shrubs by 1/3rd following planting at Landscape Architects' direction.

TREE STAKES, TIES & GUARDS

Trees planted within grassed areas to be provided with appropriate conical strimmer guards. Stakes to be pressure impregnated softwood (bark, chestnut, round, peeled, straight, free of projections and pinned at one end. Minimum length and thickness to be determined as follows:

Tree type Min Dia. Overall Ht above ground No. stakes No. ties
Bare root 100mm 1.8m 2 1

GRASS SEEDING AREAS

Grass seeding generally to BS 4428 (1996) 'Code of practice for general landscape operations'. When topsoil is reasonably dry and workable grade to smooth flowing contours removing all hollows and ridges. Cultivate soil to full depth and break up any compacted topsoil. Apply approved herbicide to control perennial weeds and allow period of time to elapse as recommended by manufacturer before final cultivation. Apply proprietary pre-seeding fertilizer. Reduce top 25mm of topsoil to a fine silt by further cultivation. Remove stones exceeding 50mm in any dimension. Sow approved grass seed mix in accordance with suppliers recommendations during appropriate season and weather conditions, e.g. (Crested green perennials) mix 42 (Quality Lawn) (or equal approved) at 50g/m2. Lightly harrow or rake then roll and water off with lightweight roller.

GRASS SEEDING AREAS: ESTABLISHMENT CUT

When grass is between 40-75mm high remove stones and debris exceeding 50mm in any dimension and roll with a lightweight roller. About 48 hours later cut grass to approximately 30mm high. Remove and dispose of all cuttings.

PROTECTIVE FENCING

The contractor shall maintain fencing until all site works are complete. The contractor will then remove the fencing and reinstate the ground. The fencing will remain the property of the contractor. Within the area so fenced, the existing ground level shall be neither raised nor lowered, all excavations shall then be carried out by hand. The Local Planning Authority shall be advised in writing when the protective fencing has been erected so that it can be checked on site before development commences, and shall thereafter be maintained during the period of construction.

MAINTENANCE

Regular visits (minimum 20 No.) required during the defects liability / rectification period to maintain all planted areas in a weed and litter free condition using a combination of thermal spray and hand weeding to be agreed with the Landscape Architect. Any plant found to be dead, dying or otherwise defective shall be replaced during the next planting season. Maintenance to include watering, pruning, pest and disease control and re-mulching as required. Grass areas to be mowed at 2 week intervals during the growing season.

Watering shall be carried out as necessary to maintain healthy growth as required by the Landscape Architect. First visit to be immediately prior to handing over and to include a fertilizer treatment of Erimag CRF granular fertilizer at 200g / m2 and 25mm depth bark mulch top up to all planted areas.

SAFETY PRECAUTIONS

The landscape sub-contractor is to take all safety precautions to prevent any injury to any persons. The landscape sub-contractor shall comply with the requirements of the Health & Safety at Work Act 1974 and current Construction, Design and Management Regulations (2015).

WILDFLOWER MANAGEMENT

Do not use fertiliser

Control weeds before sowing. Annual weeds may be hoed, buried or killed with a contact herbicide. Perennial weeds should be eradicated by a translocated glyphosate-based herbicide.

Sow mixtures either from early March to early May, or from early August to mid September. Cultivate the ground to provide a fine, weed free seed bed. If necessary, Sow evenly at 4g/m2 / m2, thoroughly mix one part seed with four parts dry sand to easily distribute.

Rake used in lightly with spring-tined rake and firm soil by treading or, preferably, rolling. Water with a fine spray and keep well watered and free from unwanted plants.

Cut the seed every six-eight weeks during the first year after sowing and remove the cuttings, in the following years cut in early spring before growth starts and in October once wild flowers have been shed - remove all cuttings.
