WHY CHOOSE TECKWOOD?

Through advances in technology Teckwood is committed to using a revolutionary mix of FSC® certified wood and recycled plastics that would have otherwise ended up in landfill. Our Wood Plastic Composite (WPC) cladding and decking is a long life product which can again be recycled in the future. This is our win-win solution to sustainable living..

Here at Teckwood we truly believe in sustainability and by using our cladding, decking or flooring products you are helping the environment. Our incredibly Eco friendly products are made from FSC® 100% certified wood and recycled plastic that would otherwise end up in landfill.

Teckwood's decking board has excellent anti-slip properties. It is made from 60% plastic and 40% wood as well as other additives, delivering you a long lasting low maintenance product. As our decking does not rot or mould it makes the board less slippery compared to traditional timber boards. Our product has been tested by an independent body for its anti-slip properties and have got fantastic results.

Colour Infused technology brings standard dull plain decking to life, mixing colours to give a more realistic life like effect. It gives an amazing 3D effect making your decking or cladding appear more like natural wood staining finish. Our 3D printed boards offer a deep wood like imprint making a real eye catching finish.

Teckwood's wood plastic composite cladding and decking does not suffer like traditional timber when subject to everything nature can throw at it. The anti-rot, mould resistant properties make the cladding and decking an extremely effective low maintenance cladding or decking for those who do not want to compromise.

Teckwood's European Class B composite cladding and vinyl composite flooring are what we believe the perfect solution thanks to cutting edge technology. They offer an unprecedented level of realism delivering a total solution for every design. If your project is domestic, public, commercial or industrial our portfolio and extensive knowledge coupled with our long term commitment enables Teckwood to deliver quality that lasts.

No detail went un-noticed when we created our composite cladding, decking or flooring. You can choose from a wide range of styles and colours that never need to be painted, sealed or stained. Leaving you time to enjoy the finished surface and more importantly saving you time and money.

Cost Effective in the long term, traditional timber requires upkeep and regular painting or staining to ensure its durability and to also keep the appearance looking good. With our composite it's virtually maintenance free, it does not require painting or staining and will not rot like wood.

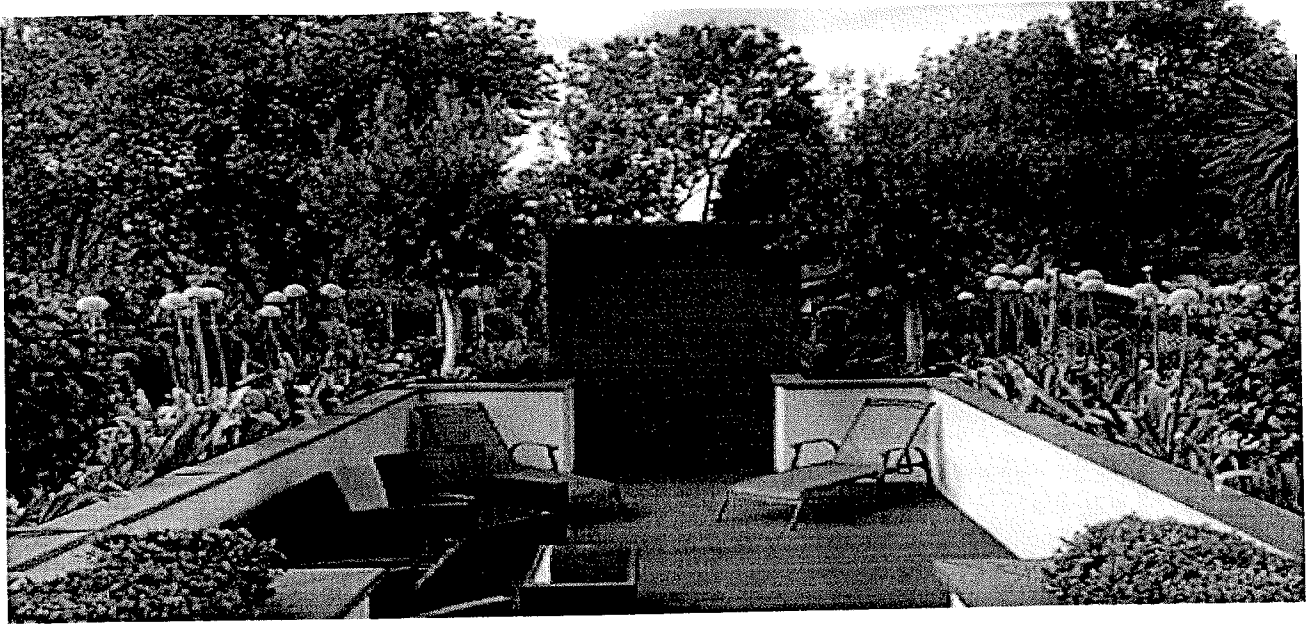

Our products are designed and produced with only the highest quality in mind and come with up to 15 years of warranty. All of our products are subject to our company's terms and conditions.

THE TECKWOOD STORY

At Teckwood we have complete faith in our products. With over a decade of experience and years of technological research and development. This gives you our valued customer complete faith in our composite products.

QUALITY

Our products are designed and produced with only the highest quality in mind. At Teckwood we are so proud of our wood plastic composite products that we guarantee you at least a decade of quality on all of our products subject to our company's terms and conditions. All of our products are produced with large quantities of recycled materials which mean that they are incredibly environmentally friendly, furthermore all of our products are REACH compliance. This means that they are completely 100% free of toxic chemicals. The products we sell offer many of the same great benefits of traditional timber but require minimum treatment and upkeep without compromising on quality.

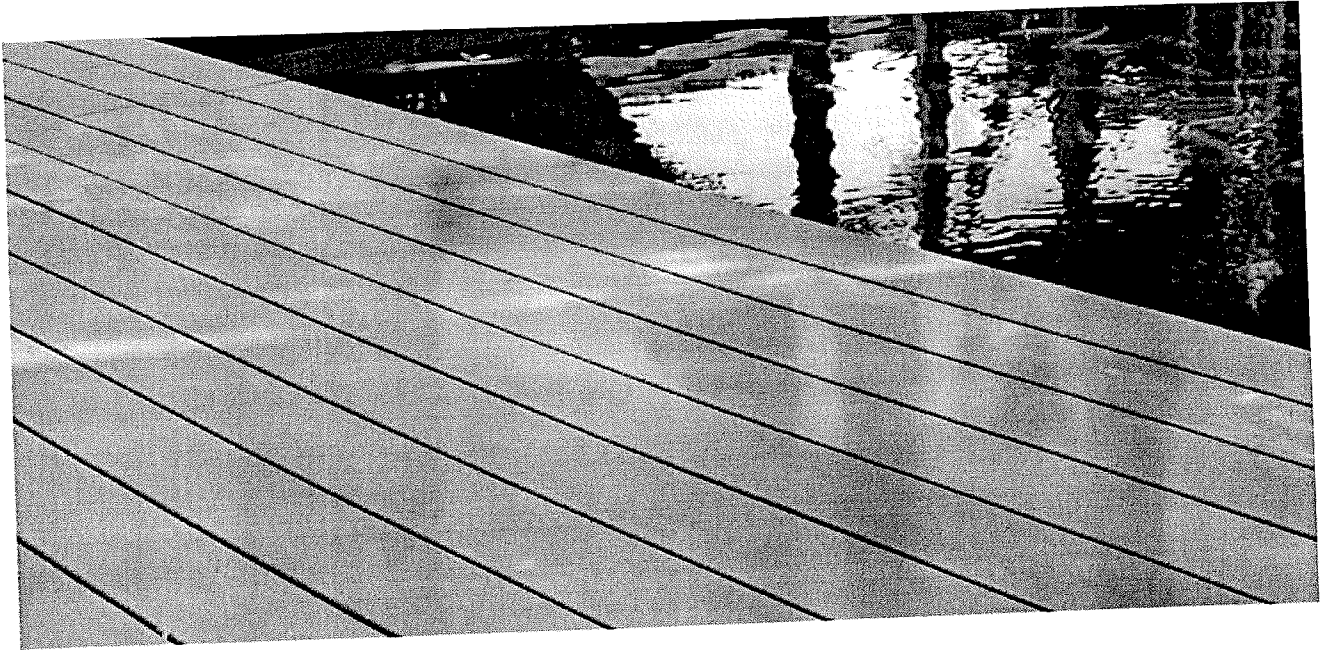

HONESTY

We at Teckwood draw our products from many years of technological development and experience. This allows us to have complete faith in our products. We will never wrongly sell you a product that doesn't meet your needs, all of our representatives are trained to ensure they provide the best possible product at the best possible price, ensuring 100% satisfaction guaranteed.

YOU

We truly believe that without the customer our business would not succeed, there is no one more important to us. We at Teckwood work tirelessly to ensure that our products meet your needs and that the vision you have for your home is met. We do this because we know without you there is no us.

Teckwood's European Class B fire rated composite cladding is at the forefront of development. Not only does the FSC® certified cladding provide a hardwearing protective barrier our low maintenance eco-friendly cladding recreates the textured look and feel of timber cladding.

Teckwood eco-friendly composite cladding is the ideal low maintenance, rot free alternative to traditional timber cladding and siding. The simple combination of FSC® certified timber and recycled high density polyethylene plastics make wood plastic composite cladding one of the most environmentally friendly and comprehensive European Class B. fire rated building products on the market.

Our European Class B fire rated WPC cladding has been designed with the beauty of natural wood decking, it is a superb over-clad solution for existing properties, or a part of a new build façade. Available in four contemporary colours, the distinct colour fused look takes skill and impeccable attention to detail to achieve enabling homeowners, constructors and architects to create striking individual homes which are fire rated and very low maintenance.

We begin our formula by combining real timber with recycled plastic to replicate the natural character of the wood, adding the longevity, durability and the strength of plastics. To create a low maintenance composite wood cladding that means you will never have to treat your facade throughout its lifespan. Wood plastic composite cladding offers improved acoustic performance and thermal conductivity.

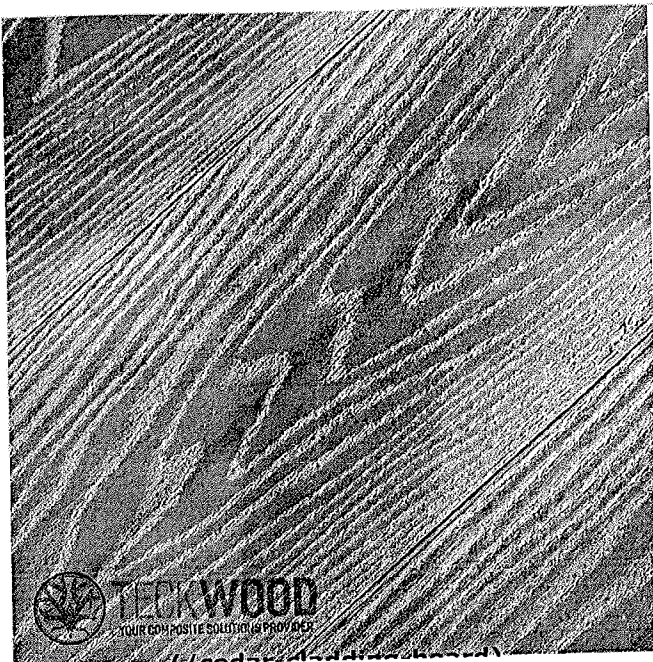

After adding colour for depth and subtle variation our engineers complete the process by adding an ultra violet stabiliser along with an anti mould agent to ensure that your wood plastic cladding will stay rich, vibrant and naturally long lasting beautiful for years to come due to its unsurpassed protection in even the harshest of environments.

Composite cladding is not just about the appearance, it is a UV stable cladding, easy installed and offers excellent value for money making it a long term investment that will not let you down.

Teckwood's distinctive wood plastic composite cladding is the perfect green solution for garden homes, houses of distinction, commercial properties and any architecturally led project.

Wood plastic composite cladding is visually attractive in appearance and has minimal maintenance requirements. It is one of the best European Class B fire rated materials for cladding on the market. The quality of the FSC® certified timber and recycled

The Best Fire Rated Composite Cladding On The Market.

plastics used to replicate the authentic appearance of traditional wooden cladding has a huge impact on the stability and calibre of your finished facade.

Simple & Easy To Clean & Maintain

Teckwood's composite cladding is a premium product and is available in a variety of warm contemporary colours and never needs to be oiled, painted, sealed or stained. The ultra violet sun and water resistant boards will last for years without rotting, warping or splitting. Occasionally, should you wish, wash your composite cladding using a soft bristle brush and soapy water or alternatively use a jet wash.

Safety & Durability

Our carcinogenic free high performance elegant cladding is ideal for all outside areas. It is manufactured with an innovation easy installation fixing system. Teckwood's wood plastic composite cladding resists mold, mildew, vermin and will not rot, crack or splinter. Our composite cladding system gives your home a timeless façade.

Design & Low Life Cycle Costs

Not only does our FSC® certified European Class B cladding offer an innovative and unique solution. The elegant design and unrivalled durability can accommodate the most challenging of design. Initially the cost of timber cladding may be less than wood plastic composite cladding but when you take into account the recurring cost of maintaining of a timber cladding, especially if you have to scaffold the building, the life cycle costs of composite cladding will offer lower operating costs throughout the full life cycle of the building.
