Dear Sir/Madam,

**Erection of private stable block and barn at Land North of Wren Centre,
Westbourne Road, Emsworth**

Thank you for consulting Hampshire County Council (HCC) as the mineral planning authority (MPA) with regards to the above planning application.

The proposed development lies within the mineral and waste consultation area (MWCA) – Minerals section. This area is informed by the mineral safeguarding area (MSA) as defined through **Policy 15: Safeguarding – mineral resources** of the adopted Hampshire Minerals and Waste Plan (2013) (HMWP) and indicates where viable, safeguarded mineral resources are likely to be present.

The purpose of this policy is to protect potentially economically viable mineral resource deposits from needless and unnecessary sterilisation. The policy seeks to encourage the recovery, where possible, of potential viable mineral resources prior to development, this concept is known as prior-extraction. It is noted and welcomed that incidental extraction has been identified as a possibility by the applicant and this is strongly supported.

Prior-extraction offers potential opportunities to reuse recovered minerals within the development itself or upcycle them to nearby aggregate recycling facilities. This in turn has strong potential to reduce the amount of waste generated through excavation on site as well as reducing the need for imported construction material.

The MWPA would still like to encourage full consideration of the opportunities for mineral extraction prior and as part of the proposed development.

Director of Economy, Transport and Environment
Stuart Jarvis BSc DipTP FCIHT MRTPI

Particular opportunities may lie in the recovery of mineral deposits uncovered during the preparation and construction phases of the project, for example through the excavation of footings or trenches for buildings, roads, landscaping and utility infrastructure associated with the development.

The recovered mineral could then be either re-used on site, which could encourage a reduction of excavation waste removed from site as well as inbound materials for construction uses associated with reduced costs, as well as potential to export off site to a local mineral operator for further treatment which has potential for additional revenue for the developer. It is recommended that discussions are made between the developer and a local mineral operator at the earliest stage. There should be no additional vehicle movements associated with these practices, as well as noise, vibration, dust issues.

HCC would therefore request the following conditions to be included in any permission for this planning application, to be delivered through submitted construction management plans or similar, requiring a statement outlining:

- i. a method for ensuring that minerals that can be viably recovered during the development operations are recovered and put to beneficial use; and
- ii. a method to record the quantity of recovered mineral (re-use on site or off site) and to report this data to the MPA.

Hampshire County Council is available to discuss this in more detail. Further information on safeguarding and Hampshire County Council's approach to it is available in the adopted Minerals and Waste Safeguarding in Hampshire Supplementary Planning Document, which can be found on our website: <http://www3.hants.gov.uk/mineralsandwaste/planning-policy-home/hmwp-spds.htm>

Yours faithfully,

Sophie Champion
Principle Planning Officer
