

Location of Tree

This image is considerably out of date but is attached to highlight the position of the tree in respect to our residence and the adjoining properties:

Reason For Work

The available garden at the rear of our property is roughly 9m wide by 8m deep (that being from the northern fence to the edge of our conservatory). Of this, the tree canopy covers 7m from the northern fence and 8m from the westerly fence.

The reason for our application is that due to the canopy size, light in to the rear of the property is considerably impaired. In addition, as a result of the canopy coverage it makes using the garden during summer months the impossible due to falling needles.

Work being Applied For

In April 2009 a previous application to have the tree canopy reduced by 1/3 was accepted by Havant Borough Council. The tree surgeon that carried out this work suggested that it should be repeated every 4 years for the health of the tree.

With this in mind our application is to have the current canopy size reduced by 1/3.
