The planting is at a density of 3 plants/sqm.

Beds A - E are hedging plants planted in a staggered row with 0.3m centres and Beds F & G are also hedging but at a density of 4 plants/linm. The beds should be dressed with 75cm bark chippings to retain the moisture and suppress the weeds.

The raised planters should be lined with a waterproof membrane and filled with BS quality top soil mixed compost. The trees shall be planted in a suitable sized tree pit and triple staked to allow for the prevailing wind.

Maintenance schedule:

All planted areas should be annually pruned and weeded as necessary to maintain good plant shape and to remove dead or damaged leaves. Any plant deaths in the first 5 years will be replaced for matching plant species and size and any replacements to be in keeping with the original planting. The trees stakes and ties will be regularly checked and adjusted as the trees grow and mature.
