

Planning permission for Advance Entrance Sign to Hayling Golf Club

Proposed Advance Entrance Sign

Note Font style may change slightly and a direction arrow added

Sign Size width 3015mm height 1650mm thickness 3mm

Materials used

The sign panel is made from Aluminium composite, 3mm thick, CNCd to shape with a laminated print to the face. Aluminium sign channel across the back.

This takes the flex out of the panel and also enables us to fix it to the posts (both posts are 76mm steel channel are powder coated ali) using stainless steel twist in clips.

The same method of fixing is used for traffic signs across the UK, so it's tried and tested
