3. Description of the Proposal

Please describe the proposed development including any change of use:

The development comprises two phases of ground mounted solar PV installation. The first phase comprises a 50kWp ground mounted solar PV array within the grounds of Pfizer's industrial manufacturing site. The second phase will be similar in approach but is dependent on successful review of Phase I. Both phases will be located on part of the site where buildings were demolished as part of the site's ongoing evolution. It is a brownfield development. The PV array will generate low carbon electricity that will be used directly by Pfizer on site to support the manufacturing activities. Modules will be installed using the Renusol Console mounting system which requires no foundations and is a low height arrangement. Modules will be installed individually in landscape layout, giving a maximum height above ground level of less than 1m. During its life the Phase I array will displace approximately 698 tonnes of carbon dioxide, making a valuable contribution to sustainable development.
