

Additional information for 9 Wisteria Gardens Fence relocation.

Please find the below list which I'd like to be considered in the application.

The current fence is in various sites of repair and needs replacing.

This offers the opportunity to relocate the new fence to a more beneficial position.

The existing trees and hedge will provide the back ground for a more varied type of hedging which will benefit from the increased sunlight (currently only a few morning hours)

Hawthorn, Blackthorn, Crabapple, Hazel and sweet rose briar will be planted to increase bio-diversity.

Bird boxes can be fitted and provision for Hedgehogs to use the holes in the gravel boards.

Currently the existing hedge only attracts litter and does on occasion overhang the foot path.

Also a new fence would provide me with more security and no noise pollution to neighbours and myself with the flappy existing panels rattling in the posts.

The footpath is a generous 2 meters wide and only cars park there currently.
