

Planning Application for solar panels at 10 Spring Gardens, Emsworth, PO10 7AU

HERITAGE STATEMENT

The Planning Application is to install six black solar panels on the front roof and six black solar panels on the rear roof in order to generate electricity.

The solar panels will not be visible from the A259 Emsworth bypass. The panels on the front roof will be visible only to those on the cul-de-sac giving access to the seven houses in the lower part of Spring Gardens. The rear panels will be visible only to the back of the eight houses which back on to the private road between us along which public access is not permitted. Enclosed by trees and buildings, the area is screened from nearby heritage assets, for example High Street.

The house opposite No 10 already has solar panels.

The panels are estimated to save 1 ton of CO₂ annually (equivalent to 29,320 miles of travel by car or 21 long haul flights) so will have a beneficial impact on our planet and help reduce Havant's greenhouse gas emissions.

The panels will have no impact on any wildlife habitats, SSI sites or similar areas.

The house was built in 1984 and is not a listed building.

I do not believe this would have an adverse affect on the Emsworth Conservation Area.

I am very willing to show you the site.
