

Narinder,

Thank you for the notification about the retained wetland planning application for the Havant Thicket Reservoir. I have started having a look through the information on the planning portal and there are supporting documents referred to;

- Construction Environment Management Plan (to be submitted to discharge condition 5)
- Water Quality Management Plan (page 9 of Env Statement of Conformity refers)
- Arboricultural Impact Assessment (You said we did report refers)

These do not seem to be on the portal for the wetland application. Can you advise asap;

- **Where I can find these documents?**
- **If they have not yet been submitted, can you give an indication as to when you expect to receive them?**
- **If documents are being submitted separately to discharge a planning condition are stakeholders notified?, and is the deadline for comments different?** (hopefully as we have not seen them yet)

The CEMP provided for the phase 1 access road works was not adequate to cover works at the main reservoir site, so I am keen to see how it has been improved. The reservoir Env Sub Group stakeholders were advised by P.Water that it would be provided with the Reserved Matters Application when we would have the opportunity to comment.

The WQ Management Plan is especially important for this part of the scheme as the wetland retaining structure will cross 3 streams and there are already significant problems with sediment mobilisation from the site via the water courses all the way down to the Langstone Harbour SPA/SAC, with a brown plume evident extending out into the harbour.

The Arb Impact Assessment is especially important due to the areas of woodland to be flooded.
